APPENDIX 1 TO ANNEX F

ICT ACCESSIBILITY REQUIREMENTS

What is ICT?

Information and Communications Technology (ICT) includes hardware, software, voice communication, video capabilities and digital content (including web and non-web-based information).

What is ICT accessibility and why is it important?

"ICT accessibility ensures that people with and without disabilities can access the same information, perform the same tasks, and receive the same services using information technology. It is the digital equivalent to accessibility in the physical environment —the curb cuts, ramps, railings, etc., of the digital age. While ICT accessibility can provide usability benefits to everyone who uses ICT, it is a vital necessity to many people with disabilities." - NASCIO - Accessibility in IT Procurement

About this document and Copyright Notice

This document reproduces relevant ICT accessibility requirements from the EN 301 549 v3.2.1 (2021-03) Harmonised European Standard – Accessibility requirements for ICT products and services (© used under license from European Telecommunications Standards Institute 2021. © Comité Européen de Normalisation 2021. © Comité Européen de Normalisation Électrotechnique 2021. All rights reserved.), which includes the Web Content Accessibility Guidelines (WCAG) 2.1 level AA. Note, where the EN 301 549 references VOID criteria, for the purposes of this document, we have excluded the technical explanation as to why the WCAG criteria no longer apply. Refer to the EN 301 549 (hyperlink below) for this information if necessary.

Intellectual Property Rights (IPRs) essential or potentially essential to normative deliverables may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for ETSI members and non-members, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (https://ipr.etsi.org/). Please visit ETSI IPR database to search for any IPRs.

At first glance, some requirements may appear to be unrelated to this product or service. They have been included for consideration since the full feature set of a Vendor's product or service may not be known. For example, a video may be embedded into product documentation, so accessibility requirements for video and audio may become relevant.

Appendices include definitions, references, and practical guidance on creating accessible documentation.

Internal to this document references are included but not always linked (footnotes or otherwise).

Part A - Functional performance statements

These are explanatory (non-testable) statements that introduce the core aspects that the offered product or service must provide to be considered accessible.

- **4.2.1. Usage without vision:** Where ICT provides visual modes of operation, the ICT provides at least one mode of operation that does not require vision. This is essential for users without vision and benefits many more users in different situations.
 - NOTE 1: A web page or application with a well formed semantic structure can allow users without vision to identify, navigate and interact with a visual user interface.
 - NOTE 2: Audio and tactile user interfaces may contribute towards meeting this clause.
- **4.2.2. Usage with limited vision:** Where ICT provides visual modes of operation, the ICT provides features that enable users to make better use of their limited vision. This is essential for users with limited vision and benefits many more users in different situations.
 - NOTE 1: Magnification, reduction of required field of vision and control of contrast, brightness and intensity can contribute towards meeting this clause.
 - NOTE 2: Where significant features of the user interface are dependent on depth perception, the provision of additional methods of distinguishing between the features may contribute towards meeting this clause.
 - NOTE 3: Users with limited vision may also benefit from non-visual access (see clause 4.2.1).
- **4.2.3. Usage without perception of colour:** Where ICT provides visual modes of operation, the ICT provides a visual mode of operation that does not require user perception of colour. This is essential for users with limited colour perception and benefits many more users in different situations.
 - NOTE: Where significant features of the user interface are colour-coded, the provision of additional methods of distinguishing between the features may contribute towards meeting this clause.
- **4.2.4. Usage without hearing:** Where ICT provides auditory modes of operation, the ICT provides at least one mode of operation that does not require hearing. This is essential for users without hearing and benefits many more users in different situations.

- NOTE: Visual and tactile user interfaces, including those based on sign language, may contribute towards meeting this clause.
- **4.2.5. Usage with limited hearing:** Where ICT provides auditory modes of operation, the ICT provides enhanced audio features. This is essential for users with limited hearing and benefits many more users in different situations.
 - NOTE 1: Enhancement of the audio clarity, reduction of background noise, providing a joint monaural option, adjustment of balance of both audio channels, increased range of volume and greater volume in the higher frequency range can contribute towards meeting this clause.
 - NOTE 2: Allowing the use of Assistive Listening Devices, such as headsets with noise cancellation (connected by cable, Bluetooth or WLAN) can contribute towards meeting this clause.
 - NOTE 3: Users with limited hearing may also benefit from non-hearing access (see clause 4.2.4).
- **4.2.6. Usage with no or limited vocal capability:** Where ICT requires vocal input from users, the ICT provides at least one mode of operation that does not require them to generate vocal output. This is essential users with no or limited vocal capability and benefits many more users in different situations.
 - NOTE 1: Vocal output includes speech and other orally generated sounds, such as whistles and clicks.
 - NOTE 2: Keyboard, pen or touch user interfaces may contribute towards meeting this clause.
- **4.2.7. Usage with limited manipulation or strength:** Where ICT requires manual actions, the ICT provides features that enable users to make use of the ICT through alternative actions not requiring manipulation, simultaneous action or hand strength. This is essential for users with limited manipulation or strength and benefits many more users in different situations.
 - NOTE 1: Examples of operations that users may not be able to perform include those that require fine motor control, path dependent gestures, pinching, twisting of the wrist, tight grasping, or simultaneous manual actions.
 - NOTE 2: One-handed operation, sequential key entry and speech user interfaces may contribute towards meeting this clause.
 - NOTE 3: Some users have limited hand strength and may not be able to achieve the level of strength to perform an operation. Alternative user interface solutions that do not require hand strength may contribute towards meeting this clause.
- **4.2.8. Usage with limited reach:** Where ICT products are free-standing or installed, all the elements required for operation will need to be within reach of all users. This is essential for users with limited reach and benefits many more users in different situations.
 - NOTE: Considering the needs of wheelchair users and the range of user statures in the placing of operational elements of the user interface may contribute towards meeting this clause.
- **4.2.9. Minimize photosensitive seizure triggers:** Where ICT provides visual modes of operation, the ICT provides **at least one mode of operation that minimizes** the potential for triggering photosensitive seizures. This is essential for users with photosensitive seizure triggers.
 - NOTE: Limiting the area and number of flashes per second may contribute towards meeting this clause.

4.2.10. Usage with limited cognition, language or learning: The ICT provides features and/or presentation that makes it simpler and easier to understand, operate and use. This is essential for users with limited cognition, language or learning, and benefits many more users in different situations.

- NOTE 1: Adjustable timings, error indication and suggestion, and a logical focus order are examples of design features that may contribute towards meeting this clause.
- NOTE 2: Providing an audio output of the text is an example of providing support for people with limited reading abilities.
- NOTE 3: Providing spelling aid and word prediction of the text is an example of providing support for people with limited writing abilities.
- NOTE 4: Interaction with content can be made easier, and less prone to errors, by presenting tasks in steps that are easy to follow...
- 4.2.11. Privacy: Where ICT provides features for accessibility, the ICT maintains the privacy of users of these features at the same level as other users.
 - NOTE: Enabling the connection of personal headsets for private listening, not providing a spoken version of characters being masked and
 enabling user control of legal, financial and personal data are examples of design features that may contribute towards meeting this clause.

Part B - Functional accessibility requirements

Explanation of the table columns

- **"EN 301 549 clause"** includes all clauses of the EN 301 549 v3.2.1 that may apply to the ICT product or service. If WCAG 2.1 is referenced, we include the full text of the WCAG success criterion along with links to the criterion, "Understanding the requirement", "How to meet the requirement" and definitions of standardized words.
- "Determination of conformance" describes how to test if you have met the requirement. These are copied from EN 301 549 v3.2.1 Annex C. More information can also be found in Annex Chapter 14 Conformance.

Scope

The following Functional Accessibility Requirements are applicable to the Functional Performance Statements in Part A. If a solution meets all of these it is considered to have met the Functional Performance Statements and is therefore deemed to conform with EN 301 549 v3.2.1.

Clauses 5, 5.1, 5.1.1, 5.1.2, 5.1.2.1, 5.1.2.2, 5.1.3, 5.1.3.1, 5.1.3.2, 5.1.3.3, 5.1.3.4, 5.1.3.5, 5.1.3.6, 5.1.3.7, 5.1.3.8, 5.1.3.9, 5.1.3.10, 5.1.3.10, 5.1.3.11, 5.1.3.12, 5.1.3.13, 5.1.3.14, 5.1.3.15, 5.1.3.16, 5.1.4, 5.1.5, 5.1.6, 5.1.6, 5.1.6.1, 5.1.6.2, 5.1.7, 5.2, 9, 9.0, 9.1, 9.1.1, 9.1.1.1, 9.1.2, 9.1.2.1, 9.1.2.2, 9.1.2.3, 9.1.2.4, 9.1.2.5, 9.1.3, 9.1.3.1, 9.1.3.2, 9.1.3.3, 9.1.3.4, 9.1.3.5, 9.1.4, 9.1.4.1, 9.1.4.2, 9.1.4.3, 9.1.4.4, 9.1.4.5, 9.1.4.10, 9.1.4.11, 9.1.4.12, 9.1.4.13, 9.2, 9.2.1, 9.2.1.2, 9.2.1.4, 9.2.2, 9.2.2.1, 9.2.2.2, 9.2.3, 9.2.3.1, 9.2.4, 9.2.4.2, 9.2.4.3, 9.2.4.4, 9.2.4.5, 9.2.4.6, 9.2.4.7, 9.2.5, 9.2.5.2, 9.2.5.3, 9.2.5.4, 9.3, 9.3.1, 9.3.1.1, 9.3.1.2, 9.3.2, 9.3.2.1, 9.3.2.2, 9.3.2.3, 9.3.2.4, 9.3.3, 9.3.3.1, 9.3.3.2, 9.3.3.3, 9.3.3.4, 9.4, 9.4.1, 9.4.1.1, 9.4.1.2, 9.4.1.3, 9.5, 9.6, 10, 10.0, 10.1, 10.1.1, 10.1.1.1, 10.1.2, 10.1.2.1, 10.1.2.2, 10.1.2.3, 10.1.2.4, 10.1.2.5, 10.1.3, 10.1.3.1, 10.1.3.2, 10.1.3.3, 10.1.3.4, 10.1.3.5, 10.1.4, 10.1.4.1, 10.1.4.2, 10.1.4.3, 10.1.4.4, 10.1.4.5, 10.1.4.10, 10.1.4.11, 10.1.4.12, 10.1.4.13, 10.2, 10.2.1, 10.2.1.2, 10.2.1.4, 10.2.2, 10.2.2.1, 10.2.2.2, 10.2.3, 10.2.3.1, 10.2.4, 10.2.4.2, 10.2.4.3, 10.2.4.4, 10.2.4.6, 10.2.4.7, 10.2.5, 10.2.5.1, 10.2.5.2, 10.2.5.3, 10.2.5.4, 10.3, 10.3.1, 10.3.1.1, 10.3.1.2, 10.3.2, 10.3.2.1, 10.3.2.2, 10.3.3, 10.3.3.1, 10.3.3.2, 10.3.3.3, 10.3.3.4, 10.4.1, 10.4.1, 10.4.1.1, 10.4.1.2, 10.4.1.3, 10.5, 10.6, 10.3.1, 10.3.1.1, 10.3.1.2, 10.3.2, 10.3.2, 10.3.3, 10.3.3, 10.3.3.1, 10.3.3.2, 10.3.3.3, 10.3.3, 10.3.3.4, 10.4.1, 10.4.1, 10.4.1.1, 10.4.1.2, 10.4.1.3, 10.5, 10.5, 10.6, 10.3.1, 10.3.1.1, 10.3.1.2, 10.3.2, 10.3.2, 10.3.3, 10.3.3, 10.3.3, 10.3.3.3, 10.3.3

EN 301 549 clause	Determination of conformance
5 Generic requirements	
5.1 Closed functionality	
5.1.1 Introduction (informative)	C.5.1.1 Introduction (informative)
ICT has closed functionality for many reasons, including design or policy. Some of the functionality of products can be closed because the product is self-contained and users are precluded from adding peripherals or software in order to access that functionality.	Clause 5.1.1 is informative and does not contain requirements that require testing.
ICT may have closed functionality in practice even though the ICT was not designed, developed or supplied to be closed.	
Computers that do not allow end-users to adjust settings or install software are functionally closed.	
5.1.2 General	
5.1.2.1 Closed functionality	C.5.1.2.1 Closed functionality
Where ICT has closed functionality, it shall meet the requirements set out in clauses 5.2 to 13, as applicable.	See clauses C.5.2 to C.13, as applicable.
NOTE 1: ICT may close some, but not all, of its functionalities. Only the closed functionalities have to conform to the requirements of clause 5.1.	
NOTE 2: The requirements within this clause replace those in clauses 5.2 to 13 that specifically state that they do not apply to closed functionality. This may be because they relate to compatibility with assistive technology or to the ability for the user to adjust system accessibility settings in products with closed functionality (e.g. products that prevent access to the system settings control panel).	

EN 301 549 clause	Determination of conformance
5.1.2.2 Assistive technology	C.5.1.2.2 Assistive technology
Where ICT has closed functionality, that closed functionality shall be operable without requiring the user to attach, connect or install assistive technology and shall conform to the generic requirements of clauses 5.1.3 to 5.1.6 as applicable. Personal headsets and induction loops shall not be classed as assistive technology for the purpose of this clause.	Type of assessment
	Testing
	Pre-conditions
	The ICT has closed functionality.
	Procedure
	 Determine the closed functions of the ICT. Check that the tests C.5.1.3 to C.5.1.6 can be carried out without the attachment or installation of any assistive technology except personal headsets or inductive loops.
	Result
	Pass: Check 2 is true
	Fail: Check 2 is false
	Not applicable: Pre-condition 1 is not met
5.1.3 Non-visual access	
5.1.3.1 Audio output of visual information	C.5.1.3.1 Audio output of visual information
Where visual information is needed to enable the use of those functions of ICT	Type of assessment
that are closed to assistive technologies for screen reading, ICT shall provide at least one mode of operation using non-visual access to enable the use of those functions.	Testing
	Pre-conditions
NOTE 1: Non-visual access may be in an audio form, including speech, or a tactile form.	Visual information is needed to enable the use of those The content of the LCT that are placed to enable the use of those CT that are placed to enable the use of those CT that are placed to enable the use of those CT that are placed to enable the use of those CT that are placed to enable the use of those CT that are placed to enable the use of those CT that are placed to enable the use of those CT that are placed to enable the use of those CT that are placed to enable the use of those CT that are placed to enable the use of those CT that are placed to enable the use of those CT that are placed to enable the use of those CT that are placed to enable the use of those CT that are placed to enable the use of those CT that are placed to enable the use of those CT that are placed to enable the use of those CT that are placed to enable the use of those CT that are placed to enable the use of the use CT that are placed to enable the use of the use CT that are placed to enable the
NOTE 2: The visual information needed to enable use of some functions may include operating instructions and orientation, transaction prompts, user input verification, error messages and non-text content.	functions of the ICT that are closed to assistive technology for screen reading.
	Procedure
	Determine the functions of the ICT closed to screen reading.

EN 301 549 clause	Determination of conformance
	Check that they are all operable using audio output access.
	Result
	Pass: Check 2 is true
	Fail: Check 2 is false
	Not applicable: Pre-condition 1 is not met.
5.1.3.2 Auditory output delivery including speech	C.5.1.3.2 Auditory output delivery including speech
Where auditory output is provided as non-visual access to closed functionality,	Type of assessment
the auditory output shall be delivered:	Inspection
 either directly by a mechanism included in or provided with the ICT; or by a personal headset that can be connected through a 3,5 mm audio jack, or an industry standard connection, without requiring the use of vision. NOTE 1: Mechanisms included in or provided with ICT may be, but are not limited to, a loudspeaker, a built-in handset/headset, or other industry standard coupled peripheral. NOTE 2: An industry standard connection could be a wireless connection. NOTE 3: Some users may benefit from the provision of an inductive loop. 	Pre-conditions 1. Auditory output is provided as non-visual access to closed functionality. Procedure 1. Check that the auditory output is delivered by a mechanism included in or provided with the ICT. 2. Check that the auditory output is delivered by a personal headset that can be connected through a 3,5 mm audio jack or an industry standard connection without requiring the use of vision.
	Result Pass: Check 1 or 2 is true Fail: Checks 1 and 2 are false Not applicable: Pre-condition 1 is not met.
5.1.3.3 Auditory output correlation	C.5.1.3.3 Auditory output correlation
Where auditory output is provided as non-visual access to closed functionality, and where information is displayed on the screen, the ICT should provide	Clause 5.1.3.3 is informative only and contains no requirements requiring test.

EN 301 549 clause	Determination of conformance
auditory information that allows the user to correlate the audio with the information displayed on the screen.	
NOTE 1: Many people who are legally blind still have visual ability, and use aspects of the visual display even if it cannot be fully comprehended. An audio alternative that is both complete and complementary includes all visual information such as focus or highlighting, so that the audio can be correlated with information that is visible on the screen at any point in time.	
NOTE 2: Examples of auditory information that allows the user to correlate the audio with the information displayed on the screen include structure and relationships conveyed through presentation.	
5.1.3.4 Speech output user control	C.5.1.3.4 Speech output user control
Where speech output is provided as non-visual access to closed functionality,	Type of assessment
the speech output shall be capable of being interrupted and repeated when requested by the user, where permitted by security requirements.	Inspection
NOTE 1: It is best practice to allow the user to pause speech output rather than	Pre-condition
just allowing them to interrupt it.	Speech output is provided as non-visual access to closed
NOTE 2: It is best practice to allow the user to repeat only the most recent portion rather than requiring play to start from the beginning.	functionality.
	Procedure
	 Check that the speech output is capable of being interrupted when requested by the user. Check that the speech output is capable of being repeated when requested by the user.
	Result
	Pass: All checks are true
	Fail: Any check is false
	Not applicable: Pre-condition 1 is not met
5.1.3.5 Speech output automatic interruption	C.5.1.3.5 Speech output automatic interruption
	Type of assessment
	Inspection

EN 301 549 clause	Determination of conformance
Where speech output is provided as non-visual access to closed functionality, the ICT shall interrupt current speech output when a user action occurs and when new speech output begins. NOTE: Where it is essential that the user hears the entire message, e.g. a safety instruction or warning, the ICT may need to block all user action so that speech is not interrupted.	Pre-conditions 1. Speech output is provided as non-visual access to closed functionality. Procedure 1. Determine the closed functions of the ICT. 2. Check that the speech output for each single function is interrupted on a user action. 3. Check that the speech output for each single function is interrupted when new speech output begins. Result Pass: Check 2 and 3 are true Fail: Check 2 or 3 are false Not applicable: Pre-condition 1 is not met
5.1.3.6 Speech output for non-text content	C.5.1.3.6 Speech output for non-text content
Where ICT presents non-text content, the alternative for non-text content shall be presented to users via speech output unless the non-text content is pure decoration or is used only for visual formatting. The speech output for non-text content shall follow the guidance for "text alternative" described in WCAG 2.1 Success Criterion 1.1.1 Non-text content .	Type of assessment Testing Pre-conditions 1. Non-text content is presented to users via speech output. Procedure 1. Check that speech output is provided as an alternative for non-text content. 2. Check that the non-text content is not pure decoration. 3. Check that the non-text content is not used only for visual formatting.

EN 301 549 clause	Determination of conformance
	Check that the speech output follows the guidance for "text alternative" described in

EN 301 549 clause	Determination of conformance
not be a spoken version of the characters entered unless the auditory output is known to be delivered only to a mechanism for private listening, or the user explicitly chooses to allow non-private auditory output.	Testing Pre-conditions
NOTE 1: Masking characters are usually displayed for security purposes and include, but are not limited to asterisks representing personal identification numbers. NOTE 2: Unmasked character output might be preferred when closed functionality is used, for example, in the privacy of the user's home. A warning highlighting privacy concerns might be appropriate to ensure that the user has made an informed choice.	 Auditory output is provided as non-visual access to closed functionality. The characters displayed are masking characters. Any option to allow non-private auditory output has not been activated. Procedure
	 Check that the auditory output is not a spoken version of the characters entered. Check that the auditory output is known to be delivered only to a mechanism for private listening.
	Result
	Pass: Any check is true
	Fail: All checks are false
	Not applicable: Pre-conditions 1or 2 are not met
5.1.3.9 Private access to personal data	C.5.1.3.9 Private access to personal data
Where auditory output is provided as non-visual access to closed functionality,	Type of assessment
and the output contains data that is considered to be private according to the applicable privacy policy, the corresponding auditory output shall only be	Testing
delivered through a mechanism for private listening that can be connected without requiring the use of vision, or through any other mechanism explicitly chosen by the user.	Pre-conditions 1. Auditory output is provided as non-visual access to closed
NOTE 1: This requirement does not apply in cases where data is not defined as being private according to the applicable privacy policy or where there is no applicable privacy policy.	functionality. 2. The output contains data. 3. There is an applicable privacy policy which considers that
NOTE 2: Non-private output might be preferred when closed functionality is used, for example, in the privacy of the user's home. A warning highlighting privacy concerns might be appropriate to ensure that the user has made an informed choice.	data to be private. Procedure

EN 301 549 clause	Determination of conformance
	 Check that the auditory output is only delivered through a mechanism for private listening. Check that the mechanism for private listening can be connected without requiring the use of vision. Check that the auditory output is delivered through all user-selectable mechanisms.
	Result
	Pass: Checks 1 and 2 or 3 are true
	Fail: Checks 1 or 2 and 3 are false
	Not applicable: Pre-conditions 1 or 3 are not met
5.1.3.10 Non-interfering audio output	C.5.1.3.10 Non-interfering audio output
Where auditory output is provided as non-visual access to closed functionality,	Type of assessment
the ICT shall not automatically play, at the same time, any interfering audible output that lasts longer than three seconds.	Testing
	Pre-conditions
	 Auditory output is provided as non-visual access to closed functionality. The ICT automatically plays interfering audible output.
	Procedure
	Check that the interfering audible output lasts no longer than three seconds.
	Result
	Pass: Check 1 is true
	Fail: Check 1 is false
	Not applicable: Pre-conditions 1 or 2 are not met
5.1.3.11 Private listening volume	C.5.1.3.11 Private listening volume
	Type of assessment

EN 301 549 clause	Determination of conformance
Where auditory output is provided as non-visual access to closed functionality and is delivered through a mechanism for private listening, ICT shall provide at least one non-visual mode of operation for controlling the volume.	Inspection
	Pre-conditions
	 The auditory output is provided as non-visual access to closed functionality. The auditory output is delivered through a mechanism for private listening.
	Procedure
	Check that there is at least one non-visual mode of operation for controlling the volume.
	Result
	Pass: Check 1 is true
	Fail: Check 1 is false
	Not applicable: Pre-conditions 1 or 2 are not met
5.1.3.12 Speaker volume	C.5.1.3.12 Speaker volume
Where auditory output is provided as non-visual access to closed functionality	Type of assessment
and is delivered through speakers on ICT, a non-visual incremental volume control shall be provided with output amplification up to a level of at least 65 dBA	Inspection and measurement
(-29 dBPaA).	Pre-conditions
NOTE: For noisy environments, 65 dBA may not be sufficient.	The auditory output is provided as non-visual access to closed functionality. The auditory output is delivered through speakers.
	Procedure
	 Check that a non-visual incremental volume control is provided. Check that output amplification up to a level of at least 65 dBA (-29 dBPaA) is available.

EN 301 549 clause	Determination of conformance
	Result
	Pass: Checks 1 and 2 are true
	Fail: Check 1 or 2 is false
	Not applicable: Pre-conditions 1 or 2 are not met
5.1.3.13 Volume reset	C.5.1.3.13 Volume reset
Where auditory output is provided as non-visual access to closed functionality, a	Type of assessment
function that resets the volume to be at a level of 65 dBA or less after every use, shall be provided, unless the ICT is dedicated to a single user.	Inspection and measurement
NOTE: A feature to disable the volume reset function may be provided in order	Pre-conditions
to enable the single-user exception to be met.	The auditory output is provided as non-visual access to closed functionality. The ICT is not dedicated to a single user.
	Procedure
	Check that a function that automatically resets the volume to be at a level of 65 dBA or less after every use is provided.
	Result
	Pass: Check 1 is true
	Fail: Check 1 is false
	Not applicable: Pre-conditions 1 or 2 are not met
5.1.3.14 Spoken languages	C.5.1.3.14 Spoken languages
Where speech output is provided as non-visual access to closed functionality,	Type of assessment
speech output shall be in the same human language as the displayed content provided, except:	Testing
	Pre-conditions
 for proper names, technical terms, words of indeterminate language, and words or phrases that have become part of the vernacular of the immediately surrounding text; 	 The speech output is provided as non-visual access to closed functionality. The speech output is not proper names, technical terms, words of indeterminate language, and words or phrases that

EN 301 549 clause	Determination of conformance
 where the content is generated externally and not under the control of the ICT vendor, the present clause shall not be required to apply for languages not supported by the ICT's speech synthesizer; for displayed languages that cannot be selected using non-visual access; where the user explicitly selects a speech language that is different from the language of the displayed content. 	 have become part of the vernacular of the immediately surrounding text. 3. The content is not generated externally and is under the control of the ICT vendor. 4. The displayed languages can be selected using non-visual access. 5. The user has not selected a speech language that is different from the language of the displayed content.
	Procedure
	Check that the speech output is in the same human language of the displayed content provided.
	Result
	Pass: Check 1 is true
	Fail: Check 1 is false
	Not applicable: Pre-conditions 1 or 3 are not met
5.1.3.15 Non-visual error identification	C.5.1.3.15 Non-visual error identification
Where speech output is provided as non-visual access to closed functionality	Type of assessment
and an input error is automatically detected, speech output shall identify and describe the item that is in error.	Testing
	Pre-conditions
	Speech output is provided as non-visual access to closed functionality. An input error is automatically detected. Procedure
	 Check that speech output identifies the item that is in error. Check that the speech output describes the item that is in error.
	Result

EN 301 549 clause	Determination of conformance
	Pass: Checks 1 and 2 are true
	Fail: Check 1 or check 2 false
	Not applicable: Pre-conditions 1 or 2 are not met
5.1.3.16 Receipts, tickets, and transactional outputs	C.5.1.3.16 Receipts, tickets, and transactional outputs
Where ICT is closed to visual access and provides receipts, tickets or other	Type of assessment
outputs as a result of a self-service transaction, speech output shall be provided which shall include all information necessary to complete or verify the	Testing
transaction. In the case of ticketing machines, printed copies of itineraries and maps shall not be required to be audible.	Pre-conditions
NOTE: The speech output may be provided by any element of the total ICT system.	 The ICT is closed to visual access The ICT provides receipts, tickets, or other outputs as a result of a self-service transaction. The information being checked is not printed copies of itineraries and maps.
	Procedure
	Check that speech output is provided which includes all information necessary to complete or verify the transaction.
	Result
	Pass: Check 1 is true
	Fail: Check 1 is false
	Not applicable: Pre-conditions 1, 2 or 3 are not met
5.1.4 Functionality closed to text enlargement	C.5.1.4 Functionality closed to text enlargement
Where any functionality of ICT is closed to the text enlargement features of	Type of assessment
platform or assistive technology, the ICT shall provide a mode of operation where the text and images of text necessary for all functionality is displayed in such a way that a non-accented capital "H" subtends an angle of at least 0,7 degrees at a viewing distance specified by the supplier.	Inspection and measurement
	Pre-conditions
The subtended angle, in degrees, may be calculated from:	A functionality of the ICT is closed to enlargement features of
$\Psi = (180 \times H) / (\pi \times D)$	platform or assistive technology.

EN 301 549 clause	Determination of conformance
Where:	A viewing distance is specified by the supplier.
 ψ is the subtended angle in degrees H is the height of the text D is the viewing distance D and H are expressed in the same units 	Procedure 1. Measure the height of a capital letter H. 2. Check that it subtends an angle of at least 0,7 degrees at the
NOTE 1: The intent is to provide a mode of operation where text is large enough to be used by most users with low vision.	specified viewing distance. Result
NOTE 2: Table 5.1 and Figure 1 illustrate the relationship between the maximum viewing distance and minimum character height at the specified minimum	Pass: Check 2 is true
subtended angle.	Fail: Check 2 is false

	Not applicable: Pre-condition 1 is not met
5.1.6.2 Input focus	C.5.1.6.2 Input focus
Where ICT functionality is closed to keyboards or keyboard interfaces and where	Type of assessment
input focus can be moved to a user interface element, it shall be possible to move the input focus away from that element using the same mechanism, in	Inspection
order to avoid trapping the input focus.	Pre-conditions
	 ICT functionality is closed to keyboards or keyboard interfaces. Input focus can be moved to a user interface element.
	Procedure
	Check that it is possible to move the input focus away from that element using the same mechanism.
	Result

EN 301 549 clause	Determination of conformance
	Pass: Check 1 is true
	Fail: Check 1 is false
	Not applicable: Pre-condition 1 or 2 is not met
5.1.7 Access without speech	C.5.1.7 Access without speech
Where speech is needed to operate closed functions of ICT, the ICT shall	Type of assessment
provide at least one mode of operation using an alternative input mechanism that does not require speech.	Inspection
	Pre-conditions
	Speech is needed to enable the use of closed functions of ICT.
	Procedure
	Check that the closed functions can be enabled by an alternative input mechanism that does not require speech.
	Result
	Pass: Check 1 is true
	Fail: Check 1 is false
	Not applicable: Pre-condition 1 is not met
5.2 Activation of accessibility features	C.5.2 Activation of accessibility features
Where ICT has documented accessibility features, it shall be possible to activate those documented accessibility features that are required to meet a specific need without relying on a method that does not support that need.	Type of assessment
	Inspection
	Pre-conditions
	The ICT has documented accessibility features to meet a specific need.
	Procedure

EN 301 549 clause	Determination of conformance
	Check that it is possible to activate those accessibility features without relying on a method that does not support that need.
	Result
	Pass: Check 1 is true
	Fail: Check 1 is false
	Not applicable: Pre-condition 1 is not met
9 Web	
9.0 General (informative)	C.9.0 General (informative)
Requirements in clause 9 apply to web pages (as defined in clause 3.1) including:	Clause 9.0 is informative only and contains no requirements requiring test.
 Conformance with W3C Web Content Accessibility Guidelines (WCAG 2.0) Level AA is equivalent to conforming with clauses 9.1.1, 9.1.2, 9.1.3.1 to 9.1.3.3, 9.1.4.1 to 9.1.4.5, 9.2.1.1, 9.2.1.2, 9.2.2, 9.2.3, 9.2.4, 9.3, 9.4.1.1, 9.4.1.2 and the conformance requirements of clause 9.6 of the present document. Conformance with W3C Web Content Accessibility Guidelines (WCAG 2.1) [5] Level AA is equivalent to conforming with all of clauses 9.1 to 9.4 and the conformance requirements of clause 9.6 of the present document. Requirements for non-web documents and non-web software are given in clauses 10 and 11 respectively. 	
NOTE 1: When evaluating websites they are evaluated as individual web pages. Web applications, including mobile web applications, are covered under the definition of web page which is quite broad and covers all web content types.	
NOTE 2: WCAG 2.0 is identical to ISO/IEC 40500:2012: "Information technology - W3C Web Content Accessibility Guidelines (WCAG) 2.0" [4].	
The requirements in clauses 9.1 to 9.4 are written using the concept of satisfying success criteria (defined in clause 3.1). A web page satisfies a WCAG success criterion when the success criterion does not evaluate to false when applied to the web page. This implies that if the success criterion puts conditions on a	

EN 301 549 clause	Determination of conformance
specific feature and that specific feature does not occur in the web page, then the web page satisfies the success criterion.	
NOTE 3: For example, a web page that does not contain pre-recorded audio content in synchronized media will automatically satisfy WCAG success criterion 1.2.2 (captions - pre-recorded) and, in consequence, will also conform to clause 9.1.2.2.	
In addition to Level AA success criteria, the Web Content Accessibility Guidelines also include success criteria for Level AAA. These are listed in clause 9.5 of the present document. Web authors and procurement accessibility specialists are encouraged to consider whether any of the WCAG Level AAA success criteria offer suggestions that may be applicable and relevant to their project, as well as potentially beneficial to some users.	
NOTE 4: The W3C states that "It is not recommended that Level AAA conformance be required as a general policy for entire sites because it is not possible to satisfy all Level AAA Success Criteria for some content".	
NOTE 5: "Void" clauses have been inserted in order to maintain alignment with the numbering of WCAG 2.1 Level A and Level AA Success Criteria.	
9.1 Perceivable	
9.1.1 Text alternatives	
9.1.1.1 Non-text content	C.9.1.1.1 Non-text content
Where ICT is a web page, it shall satisfy WCAG 2.1 Success Criterion 1.1.1 Non-text content.	Type of assessment Inspection
WCAG 2.1 Success Criterion 1.1.1 Non-text content	Pre-conditions
Understanding Non-text Content	r re-conditions
How to Meet Non-text Content	1. The ICT is a web page.
(Level A)	Procedure
All <u>non-text content</u> that is presented to the user has a <u>text alternative</u> that serves the equivalent purpose, except for the situations listed below.	Check that the web page does not fail <u>WCAG 2.1 Success</u> <u>Criterion 1.1.1 Non-text content</u> .
Controls, Input: If non-text content is a control or accepts user input, then it has a <u>name</u> that describes its purpose. (Refer to <u>Success Criterion</u>)	Result

EN 301 549 clause	Determination of conformance
 4.1.2 for additional requirements for controls and content that accepts user input.) Time-Based Media: If non-text content is time-based media, then text alternatives at least provide descriptive identification of the non-text content. (Refer to Guideline 1.2 for additional requirements for media.) Test: If non-text content is a test or exercise that would be invalid if presented in text, then text alternatives at least provide descriptive identification of the non-text content. Sensory: If non-text content is primarily intended to create a specific sensory experience, then text alternatives at least provide descriptive identification of the non-text content. CAPTCHA: If the purpose of non-text content is to confirm that content is being accessed by a person rather than a computer, then text alternatives that identify and describe the purpose of the non-text content are provided, and alternative forms of CAPTCHA using output modes for different types of sensory perception are provided to accommodate different disabilities. Decoration, Formatting, Invisible: If non-text content is pure decoration, is used only for visual formatting, or is not presented to users, then it is implemented in a way that it can be ignored by assistive technology. 	Pass: Check 1 is true Fail: Check 1 is false Not applicable: Pre-condition 1 is not met or the web page does not contain content relevant to WCAG 2.1 Success Criterion 1.1.1 Non-text content.
9.1.2 Time-based media	
9.1.2.1 Audio-only and video-only (prerecorded)	C.9.1.2.1 Audio-only and video-only (prerecorded)
Where ICT is a web page, it shall satisfy WCAG 2.1 Success Criterion 1.2.1 Audio-only and Video-only (Prerecorded). WCAG 2.1 Success Criterion 1.2.1 Audio-only and Video-only (Prerecorded) Understanding Audio-only and Video-only (Prerecorded)	Type of assessment Inspection Pre-conditions
	The ICT is a web page.
How to Meet Audio-only and Video-only (Prerecorded) (Level A) For prerecorded audio-only and prerecorded video-only media, the following are true, except when the audio or video is a media alternative for text and is clearly labeled as such:	Procedure 1. Check that the web page does not fail WCAG 2.1 Success Criterion 1.2.1 Audio-only and Video-only (Prerecorded).
	Result

EN 301 549 clause	Determination of conformance
 Prerecorded Audio-only: An <u>alternative for time-based media</u> is provided that presents equivalent information for prerecorded audio-only content. Prerecorded Video-only: Either an alternative for time-based media or an audio track is provided that presents equivalent information for prerecorded video-only content. 	Pass: Check 1 is true Fail: Check 1 is false
	Not applicable: Pre-condition 1 is not met or the web page does not contain content relevant to WCAG 2.1 Success Criterion 1.2.1 Audio-only and Video-only (Prerecorded).
9.1.2.2 Captions (prerecorded)	C.9.1.2.2 Captions (prerecorded)
Where ICT is a web page, it shall satisfy the WCAG 2.1 Success Criterion 1.2.2	Type of assessment
Captions (Prerecorded).	Inspection
WCAG 2.1 Success Criterion 1.2.2 Captions (Prerecorded)	Pre-conditions
Understanding Captions (Prerecorded)	The ICT is a web page.
How to Meet Captions (Prerecorded)	1. The ICT is a web page.
(Level A)	Procedure
<u>Captions</u> are provided for all <u>prerecorded audio</u> content in <u>synchronized media</u> , except when the media is a <u>media alternative for text</u> and is clearly labeled as such.	Check that the web page does not fail <u>WCAG 2.1 Success</u> <u>Criterion 1.2.2 Captions (Prerecorded)</u> .
	Result
	Pass: Check 1 is true
	Fail: Check 1 is false
	Not applicable: Pre-condition 1 is not met or the web page does not contain content relevant to WCAG 2.1 Success Criterion 1.2.2 Captions (Prerecorded).
9.1.2.3 Audio description or media alternative (prerecorded)	C.9.1.2.3 Audio description or media alternative (prerecorded)
Where ICT is a web page, it shall satisfy WCAG 2.1 Success Criterion 1.2.3	Type of assessment
Audio Description or Media Alternative (Prerecorded).	Inspection
WCAG 2.1 Success Criterion 1.2.3 Audio Description or Media Alternative (Prerecorded)	Pre-conditions
Understanding Audio Description or Media Alternative (Prerecorded)	1. The ICT is a web page.
How to Meet Audio Description or Media Alternative (Prerecorded)	

EN 301 549 clause	Determination of conformance
(Level A) An <u>alternative for time-based media</u> or audio description of the <u>prerecorded</u> video content is provided for <u>synchronized media</u> , except when the media is a <u>media alternative for text</u> and is clearly labeled as such.	Procedure 1. Check that the web page does not fail WCAG 2.1 Success Criterion 1.2.3 Audio Description or Media Alternative (Prerecorded). Result
	Pass: Check 1 is true Fail: Check 1 is false
	Not applicable: Pre-condition 1 is not met or the web page does not contain content relevant to WCAG 2.1 Success Criterion 1.2.3 Audio Description or Media Alternative (Prerecorded).
9.1.2.4 Captions (live)	C.9.1.2.4 Captions (live)
Where ICT is a web page, it shall satisfy WCAG 2.1 Success Criterion 1.2.4 Captions (Live). WCAG 2.1 Success Criterion 1.2.4 Captions (Live) Understanding Captions (Live) How to Meet Captions (Live) (Level AA) Captions are provided for all live audio content in synchronized media.	Type of assessment Inspection Pre-conditions 1. The ICT is a web page. Procedure 1. Check that the web page does not fail WCAG 2.1 Success Criterion 1.2.4 Captions (Live). Result Pass: Check 1 is true Fail: Check 1 is false Not applicable: Pre-condition 1 is not met or the web page does not contain content relevant to WCAG 2.1 Success Criterion 1.2.4 Captions (Live).
9.1.2.5 Audio description (prerecorded)	C.9.1.2.5 Audio description (prerecorded)

Determination of conformance
Type of assessment Inspection Pre-conditions 1. The ICT is a web page. Procedure 1. Check that the web page does not fail WCAG 2.1 Success Criterion 1.2.5 Audio Description (Prerecorded). Result Pass: Check 1 is true Fail: Check 1 is false Not applicable: Pre-condition 1 is not met or the web page does not contain content relevant to WCAG 2.1 Success Criterion 1.2.5 Audio
Description (Prerecorded).
C.9.1.3.1 Info and relationships Type of assessment Inspection Pre-conditions 1. The ICT is a web page. Procedure 1. Check that the web page does not fail WCAG 2.1 Success Criterion 1.3.1 Info and Relationships. Result

EN 301 549 clause	Determination of conformance
	Pass: Check 1 is true
	Fail: Check 1 is false
	Not applicable: Pre-condition 1 is not met or the web page does not contain content relevant to WCAG 2.1 Success Criterion 1.3.1 Info and Relationships.

WCAG 2.1 Success Criterion 1.3.5 Identify Input Purpose	Pre-conditions
Understanding Identify Input Purpose How to Meet Identify Input Purpose	The ICT is a web page.
(Level AA)	Procedure
The purpose of each input field collecting information about the user can be programmatically determined when:	Check that the web page does not fail <u>WCAG 2.1 Success</u> <u>Criterion 1.3.5 Identify Input Purpose</u> .
 The input field serves a purpose identified in the <u>Input Purposes for User Interface Components</u> section; and The content is implemented using technologies with support for identifying the expected meaning for form input data. 	Result Pass: Check 1 is true Fail: Check 1 is false
	Not applicable: Pre-condition 1 is not met or the web page does not contain content relevant to WCAG 2.1 Success Criterion 1.3.5 Identify Input Purpose.
9.1.4 Distinguishable	
9.1.4.1 Use of colour	C.9.1.4.1 Use of colour
Where ICT is a web page, it shall satisfy WCAG 2.1 Success Criterion 1.4.1 Use of Color.	Type of assessment Inspection
WCAG 2.1 Success Criterion 1.4.1 Use of Color	Pre-conditions
<u>Understanding Use of Color</u>	r re-conditions
How to Meet Use of Color	1. The ICT is a web page.
(Level A)	Procedure
Color is not used as the only visual means of conveying information, indicating an action, prompting a response, or distinguishing a visual element. Note: This success criterion addresses color perception specifically. Other forms of perception are covered in Guideline 1.3 including programmatic access to color and other visual presentation coding.	Check that the web page does not fail WCAG 2.1 Success Criterion 1.4.1 Use of Color. Result
	Pass: Check 1 is true
	Fail: Check 1 is false

EN 301 549 clause	Determination of conformance
	Not applicable: Pre-condition 1 is not met or the web page does not contain content relevant to WCAG 2.1 Success Criterion 1.4.1 Use of Color.
9.1.4.2 Audio control	C.9.1.4.2 Audio control
Where ICT is a web page, it shall satisfy WCAG 2.1 Success Criterion 1.4.2	Type of assessment
Audio Control	Inspection
WCAG 2.1 Success Criterion 1.4.2 Audio Control	Pre-conditions
Understanding Audio Control	The ICT is a web page.
How to Meet Audio Control	1. The for is a was page.
(Level A)	Procedure
If any audio on a Web page plays automatically for more than 3 seconds, either a <u>mechanism</u> is available to pause or stop the audio, or a mechanism is available to control audio volume independently from the overall system volume level.	Check that the web page does not fail <u>WCAG 2.1 Success</u> <u>Criterion 1.4.2 Audio Control</u> .
Note: Since any content that does not meet this success criterion can interfere	Result
with a user's ability to use the whole page, all content on the Web page (whether or not it is used to meet other success criteria) must meet this success criterion.	Pass: Check 1 is true
See Conformance Requirement 5: Non-Interference.	Fail: Check 1 is false
	Not applicable: Pre-condition 1 is not met or the web page does not contain content relevant to WCAG 2.1 Success Criterion 1.4.2 Audio Control.
9.1.4.3 Contrast (minimum)	C.9.1.4.3 Contrast (minimum)
Where ICT is a web page, it shall satisfy WCAG 2.1 Success Criterion 1.4.3	Type of assessment
Contrast (Minimum).	Inspection
WCAG 2.1 Success Criterion 1.4.3 Contrast (Minimum)	Pre-conditions
Understanding Contrast (Minimum) How to Most Contrast (Minimum)	The ICT is a web page.
How to Meet Contrast (Minimum)	
(Level AA)	Procedure
The visual presentation of <u>text</u> and <u>images of text</u> has a <u>contrast ratio</u> of at least 4.5:1, except for the following:	

EN 301 549 clause	Determination of conformance
 Large Text: <u>Large-scale text</u> and images of large-scale text have a contrast ratio of at least 3:1; Incidental: Text or images of text that are part of an inactive <u>user interface component</u>, that are <u>pure decoration</u>, that are not visible to anyone, or that are part of a picture that contains significant other visual content, have no contrast requirement. Logotypes: Text that is part of a logo or brand name has no contrast requirement. 	Check that the web page does not fail WCAG 2.1 Success Criterion 1.4.3 Contrast (Minimum). Result Pass: Check 1 is true Fail: Check 1 is false Not applicable: Pre-condition 1 is not met or the web page does not contain content relevant to WCAG 2.1 Success Criterion 1.4.3 Contrast (Minimum).
9.1.4.4 Resize text	C.9.1.4.4 Resize text
Where ICT is a web page, it shall satisfy WCAG 2.1 Success Criterion 1.4.4 Resize text. WCAG 2.1 Success Criterion 1.4.4 Resize text Understanding Resize text How to Meet Resize text (Level AA) Except for captions and images of text, text can be resized without assistive technology up to 200 percent without loss of content or functionality.	Type of assessment Inspection Pre-conditions 1. The ICT is a web page. Procedure 1. Check that the web page does not fail WCAG 2.1 Success Criterion 1.4.4 Resize text. Result Pass: Check 1 is true Fail: Check 1 is false Not applicable: Pre-condition 1 is not met or the web page does not contain content relevant to WCAG 2.1 Success Criterion 1.4.4 Resize text.
9.1.4.5 Images of text Where ICT is a web page, it shall satisfy WCAG 2.1 Success Criterion 1.4.5 Images of Text.	C.9.1.4.5 Images of text Type of assessment Inspection

EN 301 549 clause	Determination of conformance
WCAG 2.1 Success Criterion 1.4.5 Images of Text.	Pre-conditions
Understanding Images of Text How to Meet Images of Text	1. The ICT is a web page.
(Level AA)	Procedure
If the technologies being used can achieve the visual presentation, <u>text</u> is used to convey information rather than <u>images of text</u> except for the following:	Check that the web page does not fail <u>WCAG 2.1 Success</u> <u>Criterion 1.4.5 Images of Text</u> .
 Customizable: The image of text can be <u>visually customized</u> to the user's requirements; 	Result
Essential: A particular presentation of text is <u>essential</u> to the information	Pass: Check 1 is true
being conveyed.	Fail: Check 1 is false
Note: Logotypes (text that is part of a logo or brand name) are considered essential.	Not applicable: Pre-condition 1 is not met or the web page does not contain content relevant to WCAG 2.1 Success Criterion 1.4.5 Images of Text.
9.1.4.10 Reflow	C.9.1.4.10 Reflow
Where ICT is a web page, it shall satisfy WCAG 2.1 Success Criterion 1.4.10	Type of assessment
Reflow.	Inspection
WCAG 2.1 Success Criterion 1.4.10 Reflow	Pre-conditions
Understanding Reflow How to Meet Reflow	1. The ICT is a web page.
(Level AA)	Procedure
Content can be presented without loss of information or functionality, and without requiring scrolling in two dimensions for:	Check that the web page does not fail <u>WCAG 2.1 Success</u> Criterion 1.4.10 Reflow.
 Vertical scrolling content at a width equivalent to 320 <u>CSS pixels</u>; Horizontal scrolling content at a height equivalent to 256 <u>CSS pixels</u>. 	Result
Except for parts of the content which require two-dimensional layout for usage or meaning.	Pass: Check 1 is true Fail: Check 1 is false
Note: 320 CSS pixels is equivalent to a starting viewport width of 1280 CSS pixels wide at 400% zoom. For web content which are designed to scroll	

TH 004 T40 1	
EN 301 549 clause	Determination of conformance
horizontally (e.g. with vertical text), the 256 CSS pixels is equivalent to a starting viewport height of 1024px at 400% zoom.	Not applicable: Pre-condition 1 is not met or the web page does not contain content relevant to WCAG 2.1 Success Criterion 1.4.10
Note: Examples of content which require two-dimensional layout are images, maps, diagrams, video, games, presentations, data tables, and interfaces where it is necessary to keep toolbars in view while manipulating content.	Reflow.
9.1.4.11 Non-text contrast	C.9.1.4.11 Non-text contrast
Where ICT is a web page, it shall satisfy <u>WCAG 2.1 Success Criterion 1.4.11</u> Non-text Contrast.	Type of assessment
WCAG 2.1 Success Criterion 1.4.11 Non-text Contrast	Inspection
	Pre-conditions
<u>Understanding Non-text Contrast</u>	1. The ICT is a web page.
How to Meet Non-text Contrast	1. The ICT is a web page.
(Level AA)	Procedure
The visual <u>presentation</u> of the following have a <u>contrast ratio</u> of at least 3:1 against adjacent color(s):	Check that the web page does not fail <u>WCAG 2.1 Success</u> <u>Criterion 1.4.11 Non-text Contrast</u> .
User Interface Components: Visual information required to identify <u>user interface components</u> and <u>states</u> , except for inactive components or	Result
where the appearance of the component is determined by the user agent and not modified by the author;	Pass: Check 1 is true
 Graphical Objects: Parts of graphics required to understand the content, except when a particular presentation of graphics is <u>essential</u> to the information being conveyed. 	Fail: Check 1 is false

Exception: The visual presentation of the additional content is controlled by the user agent and is not modified by the author.	
Note: Examples of additional content controlled by the user agent include browser tooltips created through use of the HTML <u>title attribute</u> .	
Note: Custom tooltips, sub-menus, and other non-modal popups that display on hover and focus are examples of additional content covered by this criterion.	
9.2 Operable	
9.2.1 Keyboard accessible	
9.2.1.1 Keyboard	C.9.2.1.1 Keyboard
Where ICT is a web page, it shall satisfy WCAG 2.1 Success Criterion 2.1.1 Keyboard. WCAG 2.1 Success Criterion 2.1.1 Keyboard	Type of assessment Inspection
Understanding Keyboard How to Meet Keyboard	Pre-conditions 1. The ICT is a web page.
(Level A)	Procedure
All <u>functionality</u> of the content is operable through a <u>keyboard interface</u> without requiring specific timings for individual keystrokes, except where the underlying function requires input that depends on the path of the user's movement and not just the endpoints.	Check that the web page does not fail <u>WCAG 2.1 Success</u> <u>Criterion 2.1.1 Keyboard</u> .
Note: This exception relates to the underlying function, not the input technique. For example, if using handwriting to enter text, the input technique (handwriting) requires path-dependent input but the underlying function (text input) does not.	Result Pass: Check 1 is true
Note: This does not forbid and should not discourage providing mouse input or other input methods in addition to keyboard operation.	Fail: Check 1 is false Not applicable: Pre-condition 1 is not met or the web page does not contain content relevant to WCAG 2.1 Success Criterion 2.1.1 Keyboard.
9.2.1.2 No keyboard trap	C.9.2.1.2 No keyboard trap
Where ICT is a web page, it shall satisfy WCAG 2.1 Success Criterion 2.1.2 No Keyboard Trap.	Type of assessment Inspection
WCAG 2.1 Success Criterion 2.1.2 No Keyboard Trap	Pre-conditions

EN 301 549 clause	Determination of conformance
Understanding No Keyboard Trap	The ICT is a web page.
How to Meet No Keyboard Trap	1. The left is a west page.
(Level A)	Procedure
If keyboard focus can be moved to a component of the page using a keyboard interface, then focus can be moved away from that component using only a keyboard interface, and, if it requires more than unmodified arrow or tab keys or other standard exit methods, the user is advised of the method for moving focus away.	Check that the web page does not fail <u>WCAG 2.1 Success Criterion 2.1.2 No Keyboard Trap</u> . Result
Note: Since any content that does not meet this success criterion can interfere	Pass: Check 1 is true
with a user's ability to use the whole page, all content on the Web page (whether it is used to meet other success criteria or not) must meet this success criterion.	Fail: Check 1 is false
See Conformance Requirement 5: Non-Interference.	Not applicable: Pre-condition 1 is not met or the web page does not contain content relevant to WCAG 2.1 Success Criterion 2.1.2 No Keyboard Trap.
9.2.1.4 Character key shortcuts	C.9.2.1.4 Character key shortcuts
Where ICT is a web page, it shall satisfy WCAG 2.1 Success Criterion 2.1.4	Type of assessment
Character Key Shortcuts.	Inspection
WCAG 2.1 Success Criterion 2.1.4 Character Key Shortcuts	Pre-conditions
Understanding Character Key Shortcuts	
How to Meet Character Key Shortcuts	1. The ICT is a web page.
(Level A)	Procedure
If a <u>keyboard shortcut</u> is implemented in content using only letter (including upper- and lower-case letters), punctuation, number, or symbol characters, then at least one of the following is true:	Check that the web page does not fail <u>WCAG 2.1 Success</u> <u>Criterion 2.1.4 Character Key Shortcuts</u> .
 Turn off: A mechanism is available to turn the shortcut off; Remap: A mechanism is available to remap the shortcut to use one or more non-printable keyboard characters (e.g. Ctrl, Alt, etc.); Active only on focus: The keyboard shortcut for a user interface component is only active when that component has focus. 	Result
	Pass: Check 1 is true
	Fail: Check 1 is false
	Not applicable: Pre-condition 1 is not met or the web page does not contain content relevant to WCAG 2.1 Success Criterion 2.1.4 Character Key Shortcuts.

EN 301 549 clause	Determination of conformance
9.2.2 Enough time	
9.2.2.1 Timing adjustable	C.9.2.2.1 Timing adjustable
Where ICT is a web page, it shall satisfy WCAG 2.1 Success Criterion 2.2.1 Timing Adjustable. WCAG 2.1 Success Criterion 2.2.1 Timing Adjustable Understanding Timing Adjustable How to Meet Timing Adjustable	Type of assessment Inspection Pre-conditions 1. The ICT is a web page.
 (Level A) For each time limit that is set by the content, at least one of the following is true: Turn off: The user is allowed to turn off the time limit before encountering it; or Adjust: The user is allowed to adjust the time limit before encountering it over a wide range that is at least ten times the length of the default setting; or Extend: The user is warned before time expires and given at least 20 seconds to extend the time limit with a simple action (for example, "press the space bar"), and the user is allowed to extend the time limit at least ten times; or Real-time Exception: The time limit is a required part of a real-time event (for example, an auction), and no alternative to the time limit is possible; or Essential Exception: The time limit is essential and extending it would invalidate the activity; or 20 Hour Exception: The time limit is longer than 20 hours. Note: This success criterion helps ensure that users can complete tasks without unexpected changes in content or context that are a result of a time limit. This success criterion should be considered in conjunction with Success Criterion 3.2.1, which puts limits on changes of content or context as a result of user action. 	Result Pass: Check 1 is true Fail: Check 1 is false Not applicable: Pre-condition 1 is not met or the web page does not contain content relevant to WCAG 2.1 Success Criterion 2.2.1 Timing
9.2.2.2 Pause, stop, hide	C.9.2.2.2 Pause, stop, hide Type of assessment

EN 301 549 clause	Determination of conformance
Where ICT is a web page, it shall satisfy WCAG 2.1 Success Criterion 2.2.2 Pause, Stop, Hide. WCAG 2.1 Success Criterion 2.2.2 Pause, Stop, Hide	Inspection Pre-conditions
Understanding Pause, Stop, Hide	1. The ICT is a web page.
How to Meet Pause, Stop, Hide (Level A)	Procedure
For moving, <u>blinking</u> , scrolling, or auto-updating information, all of the following are true:	Check that the web page does not fail <u>WCAG 2.1 Success</u> <u>Criterion 2.2.2 Pause, Stop, Hide</u> .
 Moving, blinking, scrolling: For any moving, blinking or scrolling information that (1) starts automatically, (2) lasts more than five seconds, and (3) is presented in parallel with other content, there is a mechanism for the user to pause, stop, or hide it unless the movement, blinking, or scrolling is part of an activity where it is essential; and Auto-updating: For any auto-updating information that (1) starts automatically and (2) is presented in parallel with other content, there is a mechanism for the user to pause, stop, or hide it or to control the frequency of the update unless the auto-updating is part of an activity where it is essential. Note: For requirements related to flickering or flashing content, refer to Guideline 2.3. 	Result Pass: Check 1 is true Fail: Check 1 is false Not applicable: Pre-condition 1 is not met or the web page does not contain content relevant to WCAG 2.1 Success Criterion 2.2.2 Pause, Stop, Hide.
Note: Since any content that does not meet this success criterion can interfere with a user's ability to use the whole page, all content on the Web page (whether it is used to meet other success criteria or not) must meet this success criterion. See Conformance Requirement 5: Non-Interference.	
Note: Content that is updated periodically by software or that is streamed to the user agent is not required to preserve or present information that is generated or received between the initiation of the pause and resuming presentation, as this may not be technically possible, and in many situations could be misleading to do so.	
Note: An animation that occurs as part of a preload phase or similar situation can be considered essential if interaction cannot occur during that phase for all users	

EN 301 549 clause	Determination of conformance
and if not indicating progress could confuse users or cause them to think that content was frozen or broken.	
9.2.3 Seizures and physical reactions	
9.2.3.1 Three flashes or below threshold	C.9.2.3.1 Three flashes or below threshold

How to Meet Status Messages	1. The ICT is a web page.
(Level AA)	Procedure

EN 301 549 clause	Determination of conformance
In content implemented using markup languages, <u>status messages</u> can be <u>programmatically determined</u> through <u>role</u> or properties such that they can be presented to the user by <u>assistive technologies</u> without receiving focus.	Check that the web page does not fail <u>WCAG 2.1 Success</u> <u>Criterion 4.1.3 Status Messages</u> .
	Result
	Pass: Check 1 is true
	Fail: Check 1 is false
	Not applicable: Pre-condition 1 is not met or the web page does not contain content relevant to WCAG 2.1 Success Criterion 4.1.3 Status Messages.
9.5 WCAG 2.1 AAA Success Criteria	C.9.5 WCAG 2.1 AAA Success Criteria
In addition to the Level AA success criteria, included in clauses 9.1 to 9.4, the Web Content Accessibility Guidelines include success criteria for Level AAA. These are listed in Annex - Table 9.1. Web authors and procurement accessibility specialists are encouraged to consider the WCAG 2.1 Level AAA success criteria that, when it is possible to apply them, may provide access beyond that required in the present document.	Clause 9.5 is informative only and contains no requirements requiring test.
NOTE: The W3C states that "It is not recommended that Level AAA conformance be required as a general policy for entire sites because it is not possible to satisfy all Level AAA Success Criteria for some content". Refer to Table 9.1: WCAG 2.1 Level AAA Success Criteria in Annex – Tables and figures (from EN 301 549).	
9.6 WCAG conformance requirements	C.9.6 WCAG conformance requirements
Where ICT is a web page, it shall satisfy all the following five WCAG 2.1	Type of assessment
conformance requirements at Level AA [5]:	Inspection
Conformance level	Pre-conditions
 Full pages Complete processes Only Accessibility-Supported Ways of Using Technologies 	1. The ICT is a web page.
5. Non-interference	Procedure
	Check that the web page satisfies WCAG 2.1 [5] conformance requirement "1: Conformance level" at Level AA.

EN 004 F40 -1	Data-main ation of confirmation
EN 301 549 clause	Determination of conformance
NOTE 1: A Web page that meets all of requirements 9.1 to 9.4, or where a Level AA conforming alternate version (as defined in WCAG 2.1 [5]) is provided, will meet conformance requirement 1. NOTE 2: According to W3C: "WCAG 2.1 extends Web Content Accessibility Guidelines 2.0 [4], which was published as a W3C Recommendation December 2008. Content that conforms to WCAG 2.1 also conforms to WCAG 2.0, and therefore to policies that reference WCAG 2.0" [4]. NOTE 3: Conformance requirement 5 states that all content on the page, including content that is not otherwise relied upon to meet conformance, meets clauses 9.1.4.2, 9.2.1.2, 9.2.2.2 and 9.2.3.1.	 Check that the web page satisfies WCAG 2.1 [5] conformance requirement "2: Full pages". Check that the web page satisfies WCAG 2.1 [5] conformance requirement "3: Complete processes". Check that the web page satisfies WCAG 2.1 [5] conformance requirement "4: Only Accessibility-Supported Ways of Using Technologies". Check that the web page satisfies WCAG 2.1 [5] conformance requirement "5: Non-interference". Result Pass: All checks are true Fail: Any check is false Not applicable: Pre-condition 1 is not met.
10 Non-web documents	
10.0 General (informative)	C.10.0 General (informative)
 documents that are not web pages; documents that are not embedded in web pages; and documents that are provided with web pages but are neither embedded nor rendered together with the web page from which they are provided (i.e. the present clause applies to downloadable documents). Clause 9 provides requirements for documents that are in web pages or that are embedded in web pages and that are used in the rendering or that are intended to be rendered together with the web page in which they are embedded. NOTE 1: Some examples of documents are letters, spreadsheets, emails, books, pictures, presentations, and movies that have an associated user agent such as a document reader, editor or media player. NOTE 2: A single document may be composed of multiple files such as the video content, closed caption text, etc. This fact is not usually apparent to the end-user consuming the document/content. 	Clause 10.0 is advisory only and contains no requirements requiring test.

EN 301 549 clause	Determination of conformance
NOTE 3: Documents require a user agent in order for the content to be presented to users. The requirements for user agents can be found in clause 11.	
NOTE 4: The requirements for content that is part of software, can be found in clause 11.	
NOTE 5: The success criteria set out in clause 10 are intended to harmonize with the Working Group Note [i.26] produced by the W3C's WCAG2ICT Task Force.	
NOTE 6: "Void" clauses have been inserted in order to maintain alignment of the numbering in clauses 9, 10 and 11.	
NOTE 7: Requirements in clause 10 also apply to documents that are protected using mechanisms such as digital signatures, encryption, password protection, and watermarks when they are presented to the user.	
NOTE 8: It is best practice to provide meta data on the accessibility of the document within or separate to the document using WebSchemas/Accessibility 2.0 [i.38].	
10.1 Perceivable	
10.1.1 Text alternatives	
10.1.1.1 Non-text content	C.10.1.1.1 Non-text content
Where ICT is a non-web document, it shall satisfy the WCAG 2.1 Success Criterion 1.1.1 Non-text Content.	Type of assessment Inspection
NOTE: CAPTCHAs do not currently appear outside of the Web. However, if they do appear, this guidance is accurate.	Pre-conditions

10.1.4.3 Contrast (minimum)	C.10.1.4.3 Contrast (minimum)
Where ICT is a non-web document, it shall satisfy the WCAG 2.1 Success	Type of assessment: Inspection
Criterion 1.4.3 Contrast (Minimum).	Pre-conditions
WCAG 2.1 Success Criterion 1.4.3 Contrast (Minimum)	4. The IOT is a man week decreased
<u>Understanding Contrast (Minimum)</u>	The ICT is a non-web document.
How to Meet Contrast (Minimum)	Procedure
(Level AA)	

EN 301 549 clause	Determination of conformance
The visual presentation of <u>text</u> and <u>images of text</u> has a <u>contrast ratio</u> of at least 4.5:1, except for the following:	Check that the document does not fail <u>WCAG 2.1 Success</u> <u>Criterion 1.4.3 Contrast (Minimum)</u> .
 Large Text: <u>Large-scale</u> text and images of large-scale text have a contrast ratio of at least 3:1. Incidental: Text or images of text that are part of an inactive <u>user interface component</u>, that are <u>pure decoration</u>, that are not visible to anyone, or that are part of a picture that contains significant other visual content, have no contrast requirement. Logotypes: Text that is part of a logo or brand name has no contrast requirement. 	Result Pass: Check 1 is true Fail: Check 1 is false Not applicable: Pre-condition 1 is not met or the non-web document does not contain content relevant to WCAG 2.1 Success Criterion 1.4.3 Contrast (Minimum).
10.1.4.4 Resize text	C.10.1.4.4 Resize text
Where ICT is a non-web document, it shall satisfy the WCAG 2.1 Success Criterion 1.4.4 Resize Text. NOTE 1: Content for which there are software players, viewers or editors with a 200 percent zoom feature would automatically meet this success criterion when used with such players, unless the content will not work with zoom. NOTE 2: This success criterion is about the ability to allow users to enlarge the text on screen at least up to 200 % without needing to use assistive technologies. This means that the application provides some means for enlarging the text 200 % (zoom or otherwise) without loss of content or functionality or that the application works with the platform features that meet this requirement. NOTE 3: It is best practice to use only fonts that allow for scaling without loss of quality (e.g. pixelized presentation). This applies in particular to embedded fonts.	Type of assessment Inspection Pre-conditions 1. The ICT is a non-web document. Procedure 1. Check that the document does not fail WCAG 2.1 Success Criterion 1.4.4 Resize text. Result Pass: Check 1 is true
WCAG 2.1 Success Criterion 1.4.4 Resize Text	Fail: Check 1 is false
Understanding Resize text	Not applicable: Pre-condition 1 is not met or the non-web document
How to Meet Resize text (Level AA)	does not contain content relevant to WCAG 2.1 Success Criterion 1.4.4 Resize text.
Except for <u>captions</u> and <u>images of text</u> , <u>text</u> can be resized without <u>assistive</u> <u>technology</u> up to 200 percent without loss of content or functionality.	
10.1.4.5 Images of text	C.10.1.4.5 Images of text

10.4 Robust	
10.4.1 Compatible	
10.4.1.1 Parsing	C.10.4.1.1 Parsing
Where ICT is a non-web document, it shall satisfy the success criterion in Table 10.14.	Type of assessment Inspection
Table 10.14: Document success criterion: Parsing	Pre-conditions
For documents that use markup languages, in such a way that the markup is separately exposed and available to assistive technologies and accessibility features of software or to a user-selectable user agent, elements have complete start and end tags, elements are nested according to their specifications, elements do not contain duplicate attributes, and any IDs are unique, except where the specifications allow these features.	The ICT is a non-web document. Procedure
NOTE 1: Start and end tags that are missing a critical character in their formation, such as a closing angle bracket or a mismatched attribute value quotation mark are not complete.	Check that the document does not fail the Success Criterion in Table 10.14. Result
NOTE 2: Markup is not always available to assistive technology or to user selectable user agents such as browsers. In such cases, conformance to this provision would have no impact on accessibility as it can for web content where it is exposed.	Pass: Check 1 is true Fail: Check 1 is false
NOTE 3: Examples of markup that is separately exposed and available to assistive technologies and to user agents include but are not limited to: documents encoded in HTML, ODF, and OOXML. In these examples, the markup can be parsed entirely in two ways: (a) by assistive technologies which may directly open the document, (b) by assistive technologies using DOM APIs of user agents for these document formats.	Not applicable: Pre-condition 1 is not met.
NOTE 4: This success criterion is identical to the WCAG 2.1 Success Criterion 4.1.1 Parsing replacing "In content implemented using markup languages" with "For documents that use markup languages, in such a way that the markup is separately exposed and available to assistive technologies and accessibility features of software or to a user-selectable user agent" with the addition of notes 2 and 3 above.

	The ICT is a non-web document.
	Procedure
	Check that the software does not fail <u>WCAG 2.1 Success</u> <u>Criterion 4.1.3 Status Messages</u> .
	Result
	Pass: Check 1 is true
	Fail: Check 1 is false
	Not applicable: Pre-condition 1 is not met or the non-web document does not contain content relevant to WCAG 2.1 Success Criterion 4.1.3 Status Messages.
10.5 Caption positioning	C.10.5 Caption positioning
Where ICT is a non-web document that contains synchronized media with captions, the captions should not obscure relevant information in the synchronized media.	Clause 10.5 is advisory only and contains no testable requirements.
10.6 Audio description timing	C.10.6 Audio description timing
Where ICT is a non-web document that contains synchronized media with audio description, the audio description should not interfere with relevant audio information in the synchronized media.	Clause 10.6 is advisory only and contains no testable requirements.
11 Software	
11.0 General (informative)	C.11.0 General (informative)
This clause provides requirements for:	Clause 11.0 is advisory only and contains no requirements requiring test.
platform software;	
 software that provides a user interface including content that is in the software; 	
authoring tools;	
software that operates as assistive technology;mobile applications.	

EN 301 549 clause	Determination of conformance
NOTE 1: User agents are examples of software that provide a user interface.	
NOTE 2: The requirements for Web content, including software that is Web content, can be found in clause 9.	
NOTE 3: The requirements for documents, that may be presented by user agents, can be found in clause 10.	
NOTE 4: Although the accessibility of command line interfaces is not dealt with in the present document, accessibility may be achieved by context specific requirements, some of which may be found in clauses 5 or 11.	
Requirements in clauses 11.1 to 11.5 apply to software:	
 that is not a web page; not embedded in web pages nor used in the rendering or functioning of the page. 	
Clause 9 provides requirements for software that is in web pages or that is embedded in web pages and that is used in the rendering or that is intended to be rendered together with the web page in which it is embedded.	
Some requirements in clauses 11.1 to 11.5 have different versions for open or closed functionality. In those cases, the corresponding clause will be divided into two subclauses.	
The success criteria set out in clauses 11.1 to 11.5 are intended to harmonize with the W3C Working Group Note [i.26] produced by the W3C's WCAG2ICT Task Force.	
NOTE 5: Software that provides a user interface includes its own content. Some examples of content in software include: the controls and text displayed in a menu bar of a graphical user interface application, images that appear in a toolbar, prompts spoken in an auditory user interface, other user interaction controls, and other text, graphics or material that is not loaded from outside the software.	
11.1 Perceivable

The Least of Read The Cotton	WCAG 2.1 Success Criterion 1.4.1 Use of Color	Pre-conditions
Understanding Use of Color	<u>Understanding Use of Color</u>	

EN 301 549 clause	Determination of conformance
How to Meet Use of Color (Level A)	The ICT is non-web software that provides a user interface.
Color is not used as the only visual means of conveying information, indicating an action, prompting a response, or distinguishing a visual element. Note: This success criterion addresses color perception specifically. Other forms of perception are covered in Guideline 1.3 including programmatic access to color and other visual presentation coding.	Procedure 1. Check that the software does not fail WCAG 2.1 Success Criterion 1.4.1 Use of Color. Result Pass: Check 1 is true Fail: Check 1 is false Not applicable: Pre-condition 1 is not met, or the non-web software does not contain content relevant to WCAG 2.1 Success Criterion 1.4.1 Use of Color.
11.1.4.2 Audio control	C.11.1.4.2 Audio control
Where ICT is non-web software that provides a user interface, it shall satisfy the success criterion in Table 11.1.	Type of assessment Inspection
Table 11.1: Software success criterion: Audio control	Pre-conditions
If any audio in a software plays automatically for more than 3 seconds, either a mechanism is available to pause or stop the audio, or a mechanism is available to control audio volume independently from the overall system volume level.	The ICT is non-web software that provides a user interface.
NOTE 1: Since any part of a software that does not meet this success criterion can interfere with a user's ability to use the whole software, all content in the software (whether or not it is used to meet other success criteria) shall meet this success criterion.	Procedure 1. Check that the software does not fail the Success Criterion in Table 11.1.
NOTE 2: This success criterion is identical to the <u>WCAG 2.1 Success Criterion 1.4.2 Audio Control</u> replacing "on a Web page" with "in a software", "any content" with "any part of a software", "whole page" with "whole software", "on the Web page" with "in the software", removing "See Conformance Requirement 5: Non-Interference" and adding note 1.	Result Pass: Check 1 is true Fail: Check 1 is false
WCAG 2.1 Success Criterion 1.4.2 Audio Control	Not applicable: Pre-condition 1 is not met.

EN 301 549 clause	Determination of conformance
How to Meet Audio Control	
(Level A)	
11.1.4.3 Contrast (minimum)	C.11.1.4.3 Contrast (minimum)
Where ICT is non-web software that provides a user interface, it shall satisfy the WCAG 2.1 Success Criterion 1.4.3 Contrast (Minimum).	Type of assessment Inspection
WCAG 2.1 Success Criterion 1.4.3 Contrast (Minimum)	Pre-conditions
Understanding Contrast (Minimum)	1 10-conditions
How to Meet Contrast (Minimum)	The ICT is non-web software that provides a user interface.
(Level AA)	Procedure
The visual presentation of <u>text</u> and <u>images of text</u> has a <u>contrast ratio</u> of at least 4.5:1, except for the following:	Check that the software does not fail <u>WCAG 2.1 Success</u> <u>Criterion 1.4.3 Contrast (Minimum)</u> .
 Large Text: Large-scale text and images of large-scale text have a contrast ratio of at least 3:1; Incidental: Text or images of text that are part of an inactive user interface component, that are pure decoration, that are not visible to anyone, or that are part of a picture that contains significant other visual content, have no contrast requirement. Logotypes: Text that is part of a logo or brand name has no contrast requirement. 	Result Pass: Check 1 is true Fail: Check 1 is false Not applicable: Pre-condition 1 is not met, or the non-web software does not contain content relevant to WCAG 2.1 Success Criterion 1.4.3 Contrast (Minimum).
11.1.4.4 Resize text	
11.1.4.4.1 Resize text (open functionality)	C.11.1.4.4.1 Resize text (open functionality)
Where ICT is non-web software that provides a user interface and that supports access to enlargement features of platform or assistive technology, it shall satisfy the WCAG 2.1 Success Criterion 1.4.4 Resize Text .	Type of assessment Inspection
NOTE 1: Content for which there are software players, viewers or editors with a 200 percent zoom feature would automatically meet this success criterion when used with such players, unless the content will not work with zoom.	Pre-conditions 1. The ICT is non-web software that provides a user interface. 2. The software provides support to enlargement features of
NOTE 2: This success criterion is about the ability to allow users to enlarge the text on screen at least up to 200 % without needing to use assistive technologies. This means that the application provides some means for	platform or assistive technology.

EN 301 549 clause	Determination of conformance
functionality or that the application works with the platform features that meet this requirement. WCAG 2.1 Success Criterion 1.4.4 Resize text	Check that the software does not fail <u>WCAG 2.1 Success Criterion 1.4.4 Resize text</u> .
How to Meet Resize text (Level AA) Except for captions and images of text, text can be resized without assistive technology up to 200 percent without loss of content or functionality.	Result Pass: Check 1 is true Fail: Check 1 is false Not applicable: Pre-condition 1 is not met, or the non-web software does not contain content relevant to WCAG 2.1 Success Criterion 1.4.4 Resize text.
Where ICT is non-web software that provides a user interface which is not able to access the enlargement features of platform or assistive technology, it shall meet requirement 5.1.4 (Functionality closed to text enlargement). NOTE: Because the text rendering support in a closed environment may be more limited than the support found in user agents for the Web, meeting 11.1.4.4.2 in a closed environment may place a much heavier burden on the content author.	C.11.1.4.4.2 Resize text (closed functionality) Type of assessment Inspection and measurement Pre-conditions 1. ICT is non-web software that provides a user interface. 2. The user interface is closed to enlargement features of platform or assistive technology. 3. A viewing distance is specified by the supplier. Procedure 1. Measure the height of a capital letter H. 2. Check that it subtends an angle of at least 0,7 degrees at the specified viewing distance. Result Pass: Check 2 is true Fail: Check 2 is false Not applicable: Pre-condition 1, 2 or 3 is not met.
11.1.4.5 Images of text	

EN 301 549 clause	Determination of conformance
11.1.4.5.1 Images of text (open functionality)	C.11.1.4.5.1 Images of text (open functionality)
Where ICT is non-web software that provides a user interface and that supports access to assistive technologies for screen reading, it shall satisfy the <u>WCAG 2.1</u> Success Criterion 1.4.5 Images of Text.	Type of assessment Inspection
Criterion 1.4.5 Images of Text.	Pre-conditions
Understanding Images of Text How to Meet Images of Text (Level AA)	 The ICT is non-web software that provides a user interface. The software provides support to assistive technologies for screen reading.
If the technologies being used can achieve the visual presentation, text is used to convey information rather than images of text except for the following: • Customizable: The image of text can be visually customized to the user's requirements; • Essential: A particular presentation of text is essential to the information being conveyed. Note: Logotypes (text that is part of a logo or brand name) are considered essential.	Procedure 1. Check that the software does not fail WCAG 2.1 Success Criterion 1.4.5 Images of Text. Result Pass: Check 1 is true Fail: Check 1 is false Not applicable: Pre-condition 1 or 2 is not met, or the non-web software does not contain content relevant to WCAG 2.1 Success Criterion 1.4.5 Images of Text.
11.1.4.5.2 Images of text (closed functionality) Where ICT is non-web software that provides a user interface which is closed to assistive technologies for screen reading, it does not need to meet the WCAG 2.1 Success Criterion 1.4.5 Images of Text because there is no need to impose a requirement on all closed functionality that text displayed on the screen actually be represented internally as text (as defined by WCAG 2.1), given that there is no interoperability with assistive technology. Criterion 1.4.5 Images of Text. Understanding Images of Text	C.11.1.4.5.2 Images of text (closed functionality) Type of assessment Testing Pre-conditions 1. The ICT is non-web software that provides a user interface. 2. The user interface is closed to assistive technologies for screen reading. 3. Non-text content is presented to users via speech output.
How to Meet Images of Text (Level AA)	Procedure

EN 301 549 clause	Determination of conformance
If the technologies being used can achieve the visual presentation, text is used to convey information rather than images of text except for the following: Customizable: The image of text can be visually customized to the user's requirements; Essential: A particular presentation of text is essential to the information being conveyed.	 Check that speech output is provided as an alternative for non-text content. Check that the non-text content is not pure decoration. Check that the non-text content is not used only for visual formatting. Check that the speech output follows the guidance for "text alternative" described in WCAG 2.1 Success Criterion 1.1.1 Non-text Content.
Note: Logotypes (text that is part of a logo or brand name) are considered essential.	Result
	Pass: Check (1 and 2 and 3 and 4 are true) or (1 and 2 are false) or (1 and 3 are false)
	Fail: Checks (1 true and 2 false) or (1 true and 3 false) or (1 and 2 and 3 are true and 4 is false)
	Not applicable: Pre-condition 1, 2 or 3 is not met.
11.1.4.10 Reflow	C.11.1.4.10 Reflow
Where ICT is non-web software that provides a user interface and that supports access to assistive technologies for screen reading, it shall satisfy the success criterion in Table 11.2.	Type of assessment Inspection
Table 11.2: Document success criterion: Reflow	Pre-conditions
Content can be presented without loss of information or functionality, and without requiring scrolling in two dimensions for:	The ICT is non-web software that provides a user interface.
 Vertical scrolling content at a width equivalent to 320 <u>CSS pixels</u>; Horizontal scrolling content at a height equivalent to 256 <u>CSS pixels</u>; 	Procedure 1. Check that the software does not fail the Success Criterion in Table 11.2.
Except for parts of the content which require two-dimensional layout for usage or meaning.	Result
NOTE 1: 320 CSS pixels is equivalent to a starting viewport width of 1280 CSS pixels wide at 400% zoom. For non-web software which are designed to scroll	Pass: Check 1 is true
horizontally (e.g. with vertical text), the 256 CSS pixels is equivalent to a starting	Fail: Check 1 is false
viewport height of 1024 px at 400% zoom.	Not applicable: Pre-condition 1 is not met.

EN 301 549 clause	Determination of conformance
NOTE 2: Examples of content which require two-dimensional layout are images, maps, diagrams, video, games, presentations, data tables, and interfaces where it is necessary to keep toolbars in view while manipulating content.	
NOTE 3: This success criterion is identical to the <u>WCAG 2.1 Success Criterion</u> <u>1.4.10 Reflow</u> replacing the original WCAG 2.1 notes with notes 1 and 2, above.

Table 11.5: Software success criterion: Pause, stop, hide	Inspection
For moving, <u>blinking</u> , scrolling, or auto-updating information, all of the following are true:	Pre-conditions
 Moving, blinking, scrolling: For any moving, blinking or scrolling information that (1) starts automatically, (2) lasts more than five seconds, and (3) is presented in parallel with other content, there is a mechanism for the user to pause, stop, or hide it unless the movement, blinking, or scrolling is part of an activity where it is essential; and Auto-updating: For any auto-updating information that (1) starts automatically and (2) is presented in parallel with other content, there is a mechanism for the user to pause, stop, or hide it or to control the frequency of the update unless the auto-updating is part of an activity where it is essential. NOTE 1: For requirements related to flickering or flashing content, refer to WCAG 2.1 Guideline 2.3. 	 The ICT is non-web software that provides a user interface. Procedure Check that the software does not fail the Success Criterion in Table 11.5. Result Pass: Check 1 is true Fail: Check 1 is false Not applicable: Pre-condition 1 is not met.
NOTE 2: This success criteria is applicable to all content in the software (whether or not there is an alternate accessible mode of operation of the software) since any part of a software that does not meet this success criterion can interfere with a user's ability to use the whole software (including a user interface element that enables the user to activate the alternate accessible mode of operation).	
NOTE 3: Content that is updated periodically by software or that is streamed to the user agent is not required to preserve or present information that is generated or received between the initiation of the pause and resuming presentation, as this may not be technically possible, and in many situations could be misleading to do so.	
NOTE 4: An animation that occurs as part of a preload phase or similar situation can be considered essential if interaction cannot occur during that phase for all users and if not indicating progress could confuse users or cause them to think that content was frozen or broken.	
NOTE 5: This is to be applied to all content. Any content, whether informative or decorative, that is updated automatically, blinks, or moves may create an accessibility barrier.	

EN 301 549 clause	Determination of conformance

access to any assistive technologies, it shall satisfy the success criterion in Table 11.13.	Inspection
Table 11.13: Software success criterion: Name, role, value	Pre-conditions
For all <u>user interface components</u> (including but not limited to: form elements, links and components generated by scripts), the <u>name</u> and <u>role</u> can be <u>programmatically determined</u> ; states, properties, and values that can be set by the user can be <u>programmatically set</u> ; and notification of changes to these items is available to <u>user agents</u> , including <u>assistive technologies</u> .	The ICT is non-web software that provides a user interface. The software provides support to at least one assistive technology. Procedure
NOTE 1: This success criterion is primarily for software developers who develop or use custom user interface components. Standard user interface components on most accessibility-supported platforms already meet this success criterion when used according to specification.	Check that the software does not fail the Success Criterion in Table 11.13.
NOTE 2: For conforming to this success criterion, it is usually best practice for	Result
software user interfaces to use the accessibility services provided by platform software. These accessibility services enable interoperability between software	Pass: Check 1 is true
user interfaces and both assistive technologies and accessibility features of	Fail: Check 1 is false
software in standardised ways. Most platform accessibility services go beyond programmatic exposure of name and role, and programmatic setting of states, properties and values (and notification of same), and specify additional information that could or should be exposed and / or set (for instance, a list of the available actions for a given user interface component, and a means to programmatically execute one of the listed actions).	Not applicable: Pre-condition 1 or 2 is not met.
NOTE 3: This success criterion is identical to the <u>WCAG 2.1 Success Criterion 4.1.2 Name</u> , <u>Role</u> , <u>Value</u> replacing the original WCAG 2.1 note with: "This success criterion is primarily for software developers who develop or use custom user interface components. Standard user interface components on most	

EN 301 549 clause	Determination of conformance
accessibility-supported platforms already meet this success criterion when used according to specification." and the addition of note 2 above.	
WCAG 2.1 Success Criterion 4.1.2 Name, Role, Value	
Understanding Name, Role, Value	
How to Meet Name, Role, Value	
(Level A)	
11.4.1.2.2 Name, role, value (closed functionality)	C.11.4.1.2.2 Name, role, value (closed functionality)
Where ICT is non-web software that provides a user interface which is closed to all assistive technology it shall not have to meet the "Name, role, value" success criterion in Table 11.11 because this success criterion requires information in a programmatically determinable form.	Clause 11.4.1.2.2 contains no testable requirements.
11.4.1.3 Status messages	
11.4.1.3.1 Status messages (open functionality)	C.11.4.1.3.1 Status messages (open functionality)
Where ICT is non-web software, it shall satisfy WCAG 2.1 Success Criterion	Type of assessment
4.1.3 Status Messages.	Inspection
	Pre-conditions
	The ICT is non-web software that provides a user interface. The software provides support to assistive technologies for screen reading.
	Procedure
	Check that the software does not fail WCAG 2.1 Success Criterion 4.1.3 Status messages.
	Result
	Pass: Check 1 is true
	Fail: Check 1 is false

EN 301 549 clause	Determination of conformance
	Not applicable: Pre-condition 1 or 2 is not met, or the non-web software does not contain content relevant to WCAG 2.1 Success Criterion 4.1.3 Status messages
11.4.1.3.2 Status messages (closed functionality)	C.11.4.1.3.2 Status messages (closed functionality)
Not applicable.	Clause 11.4.1.3.2 contains no testable requirements.
11.5 Interoperability with assistive technology	
11.5.1 Closed functionality	C.11.5.1 Closed functionality
Where the closed functionality of software conforms to clause 5.1 (Closed	Type of assessment
functionality) it shall not be required to conform with clause 11.5.2 to clause 11.5.2.17.	Inspection
11.0.2.17.	Pre-conditions Pre-conditions
	The software has closed functionality.
	Procedure
	Check that the closed functionality conforms to clause 5.1.
	Result
	If check 1 is true, the software is not required to conform to clauses 11.5.2 to 11.5.17
	If check 1 is false the software is required to conform to clauses 11.5.2 to 11.5.17
	Not applicable: Pre-condition 1 is not met.
11.5.2 Accessibility services	
11.5.2.1 Platform accessibility service support for software that provides a user interface	C.11.5.2.1 Platform accessibility service support for software that provides a user interface
Platform software shall provide a set of documented platform services that	Type of assessment
enable software that provides a user interface running on the platform software to interoperate with assistive technology.	Inspection
to meroporate man acciound techniciogy.	Pre-conditions

EN 301 549 clause	Determination of conformance
Platform software should support requirements 11.5.2.5 to 11.5.2.17 except that, where a user interface concept that corresponds to one of the clauses 11.5.2.5 to 11.5.2.17 is not supported within the software environment, these requirements are not applicable. For example, selection attributes from 11.5.2.14 (Modification of focus and selection attributes) may not exist in environments that do not allow selection, which is most commonly associated with copy and paste.	Check that the platform software documentation includes
NOTE 1: These define the minimum functionality of software providing user interfaces when using platform services.	information about platform services that may be used by software that provides a user interface to interoperate with assistive technology.
NOTE 2: In some platforms these services may be called accessibility services, but in some other platforms these services may be provided as part of the user interface services.	Result
NOTE 3: User interface services that provide accessibility support by default are	Pass: Check 1 is true
considered to be part of the services provided to conform to this clause (e.g. the service for creating a new user interface element provides role, state, boundary,	Fail: Check 1 is false
name and description).	Not applicable: Pre-condition 1 is not met.
NOTE 4: To comply with this requirement the platform software can provide its own set of services or expose the services provided by its underlying platform layers, if those services conform to this requirement.	
NOTE 5: Within specific programming environments, the technical attributes associated with the user interface properties described in clauses 11.5.2.5 to 11.5.2.17 might have different names than those used within the clauses.	
11.5.2.2 Platform accessibility service support for assistive technologies	C.11.5.2.2 Platform accessibility service support for assistive technologies
Platform software shall provide a set of documented platform accessibility services that enable assistive technology to interoperate with software that	Type of assessment
provides a user interface running on the platform software.	Inspection
Platform software should support the requirements of clauses 11.5.2.5 to 11.5.2.17 except that, where a user interface concept that corresponds to one of	Pre-conditions
the clauses 11.5.2.5 to 11.5.2.17 is not supported within the software environment, these requirements are not applicable. For example, selection attributes from 11.5.2.14 (Modification of focus and selection attributes) may not	The software evaluated is platform software.
exist in environments that do not allow selection, which is most commonly associated with copy and paste.	Procedure
NOTE 1: These define the minimum functionality available to assistive technologies when using platform services.	Check that the platform software documentation includes information about platform accessibility services that enables

EN 301 549 clause	Determination of conformance
NOTE 2: The definition of platform in clause 3.1 applies to software that provides services to other software, including but not limited to, operating systems, web browsers, virtual machines.	assistive technology to interoperate with software that provides a user interface running on the platform software.
NOTE 3: In some platforms these services may be called accessibility services, but in some other platforms these services may be provided as part of the user interface services. NOTE 4: Typically these services belong to the same set of services that are described in clause 11.5.2.1. NOTE 5: To comply with this requirement the platform software can provide its own set of services or expose the services provided by its underlying platform layers, if those services conform to this requirement.	Result Pass: Check 1 is true Fail: Check 1 is false Not applicable: Pre-condition 1 is not met.
11.5.2.3 Use of accessibility services	C.11.5.2.3 Use of accessibility services
Where the software provides a user interface it shall use the applicable documented platform accessibility services. If the documented platform accessibility services do not allow the software to meet the applicable requirements of clauses 11.5.2.5 to 11.5.2.17, then software that provides a user interface shall use other documented services to interoperate with assistive technology. NOTE: The term "documented platform accessibility services" refers to the set of services provided by the platform according to clauses 11.5.2.1 and 11.5.2.2. It is best practice to develop software using toolkits that automatically implement the underlying platform accessibility services.	Inspection Pre-conditions 1. The software evaluated is software that provides a user interface. Procedure 1. Check that the software uses the applicable documented platform accessibility services. 2. Check that the software can meet the applicable requirements 11.5.2.5 to 11.5.2.17 whilst using the documented platform accessibility services. 3. Check that the software can meet requirements 11.5.2.5 to 11.5.2.17 whilst using the documented platform accessibility services and other documented services.
	Result Pass: Check 1 is true and check 2 or check 3 is true Fail: Check 1 or check 3 is false

EN 301 549 clause	Determination of conformance
	Not applicable: Pre-condition 1 is not met.
I1.5.2.4 Assistive technology	C.11.5.2.4 Assistive technology
Where the ICT is assistive technology it shall use the documented platform	Type of assessment
accessibility services.	Inspection
NOTE 1: The term "documented platform accessibility services" refers to the set of services provided by the platform according to clauses 11.5.2.1 and 11.5.2.2.	Pre-conditions
NOTE 2: Assistive technology can also use other documented accessibility ervices.	The ICT is assistive technology.
	Procedure
	Check that the assistive technology uses the documented platform accessibility services.
	Result
	Pass: Check 1 is true
	Fail: Check 1 is false
	Not applicable: Pre-condition 1 is not met.
11.5.2.5 Object information	C.11.5.2.5 Object information
Where the software provides a user interface it shall, by using the services as	Type of assessment
described in clause 11.5.2.3, make the user interface elements' role, state(s), boundary, name, and description programmatically determinable by assistive	Inspection
echnologies.	Pre-conditions
	The software evaluated is software that provides a user interface.
	Procedure
	Check that the user interface element's role is programmatically determinable by assistive technologies. Check that the user interface element's state(s) is programmatically determinable by assistive technologies.

EN 301 549 clause	Determination of conformance
	 Check that the user interface element's boundary is programmatically determinable by assistive technologies. Check that the user interface element's name is programmatically determinable by assistive technologies. Check that the user interface element's description is programmatically determinable by assistive technologies.
	Result
	Pass: Checks 1, 2, 3, 4 and 5 are true
	Fail: Check 1 or 2 or 3 or 4 or 5 is false
	Not applicable: Pre-condition 1 is not met.
11.5.2.6 Row, column, and headers	C.11.5.2.6 Row, column, and headers
Where the software provides a user interface it shall, by using the services as described in clause 11.5.2.3, make the row and column of each cell in a data table, including headers of the row and column if present, programmatically	Type of assessment Inspection
determinable by assistive technologies.	Pre-conditions
	 The software evaluated is software that provides a user interface. There are data tables in the user interface.
	Procedure
	 Select a data table in which the tests are to be performed. Check that each cell's row is programmatically determinable by assistive technologies. Check that each cell's column is programmatically determinable by assistive technologies. Check that each cell's row header, if the row header exists, is programmatically determinable by assistive technologies. Check that each cell's column header, if the column header exists, is programmatically determinable by assistive technologies.
	Result

Pass: Checks 2, 3, 4 and 5 are true Fail: Check 2 or 3 or 4 or 5 is false Not applicable: Pre-condition 1 or 2 is not met. C.11.5.2.7 Values Where the software provides a user interface, it shall, by using the services as described in clause 11.5.2.3, make the current value of a user interface element conveys information about a range of values, programmatically determinable by assistive technologies. Type of assessment Inspection Pre-conditions 1. The software evaluated is software that provides a user interface, 2. There are user interface elements that can have values. Procedure 1. Select a user interface element that can have a value, 2. Check that the current value is programmatically determinable by assistive technologies. 3. If the user interface element conveys information about a range of values, check that the minimum value is programmatically determinable by assistive technologies. 4. If the user interface element conveys information about a range of values, check that the maximum value is programmatically determinable by assistive technologies. Result Pass: Checks 2, 3 and 4 are true Fail: Check 2 or 3 or 4 is false Not applicable: Pre-condition 1 or 2 is not met. C.11.5.2.8 Label relationships Where the software provides a user interface it shall expose the relationship that a user interface element has as a label for another element, or of being labelled	EN 301 549 clause	Determination of conformance
Not applicable: Pre-condition 1 or 2 is not met. 11.5.2.7 Values Where the software provides a user interface, it shall, by using the services as described in clause 11.5.2.3, make the current value of a user interface element and any minimum or maximum values of the range, if the user interface element conveys information about a range of values, programmatically determinable by assistive technologies. 1. The software evaluated is software that provides a user interface. 2. There are user interface element that can have values. Procedure 1. Select a user interface element that can have a value. 2. Check that the current value is programmatically determinable by assistive technologies. 3. If the user interface element conveys information about a range of values, check that the minimum value is programmatically determinable by assistive technologies. 4. If the user interface element conveys information about a range of values, check that the maximum value is programmatically determinable by assistive technologies. 8. Result Pass: Checks 2, 3 and 4 are true Fail: Check 2 or 3 or 4 is false Not applicable: Pre-condition 1 or 2 is not met. by another element, using the services as described in clause 11.5.2.3, so that this information is programmatically determinable by assistive technologies.	Pre-conditions 1. The software evaluated is software that provides a user interface. 2. There are user interface elements that are labels of other user interface elements. Procedure 1. Obtain the information of each user interface element. 2. Check that the user interface element's information includes the relationship with the user interface element that is its label, if the current user interface element has a label, and that this relationship is programmatically determinable by assistive technologies. 3. Check that the user interface element's information includes the relationship with the user interface element that it is labelling, if the current user interface element is a label, and that this relationship is programmatically determinable by assistive technologies.
	Result
	Pass: Checks 2 or 3 are true
	Fail: Check 2 and 3 are false
	Not applicable: Pre-condition 1 or 2 is not met.
11.5.2.9 Parent-child relationships	C.11.5.2.9 Parent-child relationships
Where the software provides a user interface it shall, by using the services as described in clause 11.5.2.3, make the relationship between a user interface element and any parent or children elements programmatically determinable by assistive technologies.	Type of assessment
	Inspection
	Pre-conditions
	The software evaluated is software that provides a user interface.

EN 301 549 clause	Determination of conformance
	There are user interface elements that are parents of other user interface elements in a hierarchical structure.
	Procedure
	 For user interface elements that have a parent, check that the user interface element's information includes the relationship with the user interface element that is its parent. Check that the user interface elements that are parents of the user interface element selected in check 1, include the relationship with the user interface elements that are its children in their information, and that this relationship is programmatically determinable by assistive technologies. For user interface elements that are a parent of other user interface elements, check that the user interface element's information includes the relationship with the user interface elements that are its children, and that this relationship is programmatically determinable by assistive technologies. Check that the user interface elements that are a child of the user interface element selected in check 3, include the relationship with the user interface elements that are its parents in their information, and that this relationship is programmatically determinable by assistive technologies.
	Result
	Pass: Checks 1 or 2 is true and check 3 or 4 is true
	Fail: Checks 1 and 2 are false or check 3 and 4 are false
	Not applicable: Pre-condition 1 or 2 is not met.
	NOTE: For this requirement it is enough that one of the two directions of a parent-child relationship is programmatically determinable. This is the reason why the requirement checks are in pairs and why the requirement is met if one member of each pair is true.
11.5.2.10 Text	C.11.5.2.10 Text
Where the software provides a user interface it shall, by using the services as	Type of assessment
described in clause 11.5.2.3, make the text contents, text attributes, and the	Inspection

EN 301 549 clause	Determination of conformance
boundary of text rendered to the screen programmatically determinable by assistive technologies.	Pre-conditions
	 The software evaluated is software that provides a user interface. There is text rendered to the screen.
	Procedure
	 For instances of text rendered to the screen, check that the text's information includes its text content, and that this information is programmatically determinable by assistive technologies. For instances of text rendered to the screen, check that the text's information includes its attributes, and that this information is programmatically determinable by assistive technologies. For instances of text rendered to the screen, check that the text's information includes its boundary, and that this information is programmatically determinable by assistive technologies.
	Result
	Pass: Checks 1, 2 and 3 are true
	Fail: Check 1 or 2 or 3 is false
	Not applicable: Pre-condition 1 or 2 is not met.
11.5.2.11 List of available actions	C.11.5.2.11 List of available actions
Where the software provides a user interface it shall, by using the services as	Type of assessment
described in clause 11.5.2.3, make a list of available actions that can be executed on a user interface element, programmatically determinable by assistive technologies.	Inspection
	Pre-conditions
	The software evaluated is software that provides a user interface.

EN 301 549 clause	Determination of conformance
	There are user interface elements that have actions that can be executed by the user.
	Procedure
	 Check that the user interface element's information includes the list of actions that can be executed. Check that this list is programmatically determinable by assistive technologies.
	Result
	Pass: Checks 1 and 2 are true
	Fail: Check 1 or 2 is false
	Not applicable: Pre-condition 1 or 2 is not met.
11.5.2.12 Execution of available actions	C.11.5.2.12 Execution of available actions
Where permitted by security requirements, software that provides a user	Type of assessment
interface shall, by using the services as described in clause 11.5.2.3, allow the programmatic execution of the actions exposed according to clause 11.5.2.11 by	Inspection and testing
assistive technologies.	Pre-conditions
NOTE 1: In some cases the security requirements imposed on a software product may forbid external software from interfering with the ICT product. Examples of systems under strict security requirements are systems dealing with intelligence activities, cryptologic activities related to national security, command and control of military forces. NOTE 2: Assistive technologies may be required to maintain the same level of security as the standard input mechanisms supported by the platform.	 The software evaluated is software that provides a user interface. There are user interface elements that have actions that can be executed by the user. The security requirements permit assistive technology to programmatically execute user actions.
security as the standard input mechanisms supported by the platform.	Procedure
	 Check that the user interface element's information includes the list of actions that can be executed by assistive technologies according to 11.5.2.11. Check that all the actions in the list can successfully be executed by assistive technologies.

EN 301 549 clause	Determination of conformance
	Result
	Pass: Checks 1 and 2 are true
	Fail: Check 1 or 2 is false
	Not applicable: Pre-condition 1, 2 or 3 is not met.
11.5.2.13 Tracking of focus and selection attributes	C.11.5.2.13 Tracking of focus and selection attributes
Where software provides a user interface it shall, by using the services as	Type of assessment
described in clause 11.5.2.3, make information and mechanisms necessary to track focus, text insertion point, and selection attributes of user interface	Inspection and testing
elements programmatically determinable by assistive technologies.	Pre-conditions
	 The software evaluated is software that provides a user interface. There are user interface elements that enable text editing. Procedure Check that the user interface element's information includes mechanisms to track focus, text insertion point and selection attributes. Check that this information is programmatically determinable by assistive technologies. Activate those tracking mechanisms. As a user, use the text editing functionality in the evaluated software product. Check that the tracking of focus, text insertion point and selection attributes work.

	Result
	Pass: Checks 2 and 5 are true
	Fail: Check 1 or 5 is false
	Not applicable: Pre-condition 1 or 2 is not met.
11.5.2.14 Modification of focus and selection attributes	C.11.5.2.14 Modification of focus and selection attributes
	Type of assessment

EN 301 549 clause	Determination of conformance
Where permitted by security requirements, software that provides a user interface shall, by using the services as described in clause 11.5.2.3, allow assistive technologies to programmatically modify focus, text insertion point, and selection attributes of user interface elements where the user can modify these items. NOTE 1: In some cases the security requirements imposed on a software product may forbid external software from interfering with the ICT product and so this requirement would not apply. Examples of systems under strict security requirements are systems dealing with intelligence activities, cryptologic activities related to national security, command and control of military forces. NOTE 2: Assistive technologies may be required to maintain the same level of security as the standard input mechanisms supported by the platform.	Pre-conditions 1. The software evaluated is software that provides a user interface. 2. There are user interface elements that can receive focus or that enable text editing. 3. The security requirements permit platform software to programmatically modify focus, text insertion point and selection attributes of user interface elements. Procedure 1. For user interface elements that can receive focus and where the focus can be modified by a user without the use of assistive technology, check that the focus can be programmatically modified by assistive text editing by a user without the use of assistive technologies. 2. For user interface elements that enable text editing by a user without the use of assistive technology, check that the position of the text insertion point can be programmatically modified by assistive technologies. 3. For user interface elements that enable text editing, check that the selection attributes can be programmatically modified by assistive technologies where they can be modified by user without the use of assistive technology. Result Pass: All checks are true Fail: Any check is false Not applicable: Pre-condition 1, 2 or 3 is not met.
11.5.2.15 Change notification	C.11.5.2.15 Change notification
Where software provides a user interface it shall, by using the services as	Type of assessment
described in clause 11.5.2.3, notify assistive technologies about changes in	Inspection and testing
those programmatically determinable attributes of user interface elements that are referenced in requirements 11.5.2.5 to 11.5.2.11 and 11.5.2.13.	Pre-conditions

EN 301 549 clause	Determination of conformance
	The software evaluated is software that provides a user interface.
	Procedure
	 Activate notifications of changes in the user interface elements. Check that notifications about changes in object information (role, state, boundary, name and description) are sent to assistive technologies, if this information changes in the software user interface. Check that notifications about changes in row, column and headers of data tables are sent to assistive technologies, if this information changes in the software. Check that notifications about changes in values (current value, minimum value and maximum value) are sent, if this information changes in the software. Check that notifications about changes in label relationships are sent to assistive technologies, if this information changes in the software. Check that notifications about changes in parent-child relationships are sent to assistive technologies, if this information changes in the software. Check notifications about changes in text (text contents, text attributes and the boundary of text rendered to the screen) are sent to assistive technologies, if this information changes in the software. Check that notifications about changes in the list of available actions are sent to assistive technologies, if this information changes in the software. Check that notifications about changes in focus, text insertion point and selection attributes are sent to assistive technologies, if this ofcus, text insertion point and selection attributes are sent to assistive technologies, if this ofcus, text insertion point and selection attributes are sent to assistive technologies, if this ofcus, text insertion point and selection attributes are sent to assistive
	Result
	Pass: Checks 2, 3, 4, 5, 6, 7, 8 and 9 are true
	Fail: Check 2, 3, 4, 5, 6, 7, 8 or 9 is false

interface shall, by using the services as described in clause 11.5.2.3, allow assistive technologies to modify values and text of user interface elements using	Testing

EN 301 549 clause	Determination of conformance
the input methods of the platform, where a user can modify these items without the use of assistive technology.	Pre-conditions
NOTE 1: In some cases the security requirements imposed on a software product may forbid external software from interfering with the ICT product and so this requirement would not apply. Examples of systems under strict security requirements are systems dealing with intelligence activities, cryptologic activities related to national security, command and control of military forces. NOTE 2: Assistive technologies may be required to maintain the same level of security as the standard input mechanisms supported by the platform.	 The software evaluated is software that provides a user interface. There are user interface elements whose values or text can be modified by a user without the use of assistive technology. The security requirements permit assistive technology to programmatically modify values and text of user interface elements.
	Procedure
	 Check that the values of user interface elements, whose values can be modified by a user without the use of assistive technology, can be modified by assistive technologies using the input methods of the platform. Check that the text of user interface elements, whose text can be modified by a user without the use of assistive technology, can be modified by assistive technologies using the input methods of the platform.
	Result
	Pass: all checks are true
	Fail: any check is false
	Not applicable: Pre-condition 1, 2 or 3 is not met.
11.6 Documented accessibility usage	
11.6.1 User control of accessibility features	C.11.6.1 User control of accessibility features
Where software is a platform it shall provide sufficient modes of operation for	Type of assessment
user control over those platform accessibility features documented as intended for users.	Testing
ioi users.	Pre-conditions
	There are platform features that are defined in the platform documentation as accessibility features intended for users.

EN 301 549 clause	Determination of conformance
	Check that sufficient modes of operation exist where user control over platform features, that are defined in the platform documentation as accessibility features intended for users, is
	possible. Result
	Pass: Check 1 is true Fail: Check 1 is false
	Not applicable: Pre-condition 1 is not met.
11.6.2 No disruption of accessibility features	C.11.6.2 No disruption of accessibility features
Where software provides a user interface it shall not disrupt those documented	Type of assessment
accessibility features that are defined in platform documentation except when requested to do so by the user during the operation of the software.	Testing
	Pre-conditions
	There are platform features that are defined in the platform documentation as accessibility features.
	Procedure
	 Check if software that provides a user interface disrupts normal operation of platform accessibility features. Check if the disruption was specifically requested or confirmed by the user.
	Result
	Pass: Check 1 is false or both checks are true
	Fail: Check 1 is true and check 2 is false
	Not applicable: Pre-condition 1 is not met.
11.7 User preferences	C.11.7 User preferences

EN 301 549 clause	Determination of conformance	
Where software is not designed to be isolated from its platform, and provides a	Type of assessment	
user interface, that user interface shall follow the values of the user preferences for platform settings for: units of measurement, colour, contrast, font type, font	Inspection and Testing	
size, and focus cursor except where they are overridden by the user.	Pre-conditions	
NOTE 1: Software that is isolated from its underlying platform has no access to user settings in the platform and thus cannot adhere to them.	The software is software that provides a user interface.	
NOTE 2: For web content, the underlying platform is the user agent.	Procedure	
NOTE 3: This does not preclude the software from having additional values for a setting as long as there is one mode where the application will follow the system settings even if more restricted.	 Check if the software provides sufficient modes of operation that uses user preferences for platform settings for colour, contrast, font type, font size, and focus cursor. Check that the software documentation indicates that the software is designed to be isolated from its underlying platform. 	
	Result	
	Pass: Check 1 is true or Check 1 is false and check 2 is true	
	Fail: Check 1 is false and check 2 is false	
	Not applicable: Pre-condition 1, 2 or 3 is not met.	
12 Documentation and support services		
12.1 Product documentation		
12.1.1 Accessibility and compatibility features	C.12.1.1 Accessibility and compatibility features	
Product documentation provided with the ICT whether provided separately or	Type of assessment	
integrated within the ICT shall list and explain how to use the accessibility and compatibility features of the ICT.	Inspection	
NOTE: Accessibility and compatibility features include accessibility features that	Pre-conditions	
are built-in and accessibility features that provide compatibility with assistive technology.	Product documentation is supplied with the ICT.	
NOTE 2: It is best practice to use WebSchemas/Accessibility 2.0 [i.38] to provide meta data on the accessibility of the ICT.	Procedure	

EN 301 549 clause	Determination of conformance	
NOTE 3: The accessibility statement and help pages are both examples of the provision of product information.	Check that product documentation provided with the ICT lists and explains how to use the accessibility and compatibility features of the ICT.	
	Result	
	Pass: Check 1 is true	
	Fail: Check 1 is false	
	Not applicable: Pre-condition 1 is not met.	
12.1.2 Accessible documentation	C.12.1.2 Accessible documentation	
Product documentation provided with the ICT shall be made available in at least	Type of assessment	
one of the following electronic formats:	Inspection	
 a Web format that conforms to the requirements of clause 9, or a non-web format that conforms to the requirements of clause 10. NOTE 1: This does not preclude the possibility of also providing the product documentation in other formats (electronic or printed) that are not accessible. NOTE 2: It also does not preclude the possibility of providing alternate formats that meet the needs of some specific type of users (e.g. Braille documents for blind people or easy-to-read information for persons with cognitive impairments). NOTE 3: Where the documentation is integral to the ICT it will be provided through the user interface which is accessible. NOTE 4: A user agent that supports automatic media conversion would be beneficial to enhancing accessibility. 	Pre-conditions 1. Product documentation in electronic format is supplied with the ICT. Procedure 1. Check that product documentation in electronic format provided with the ICT conforms to the requirements of clauses 9 or 10 as appropriate. Result Pass: Check 1 is true Fail: Check 1 is false Not applicable: Pre-condition 1 is not met.	
12.2 Support services		
12.2.1 General (informative)	C.12.2.1 General (informative)	
ICT support services include, but are not limited to: help desks, call centres, technical support, relay services and training services.	Clause 12.2.1 is informative only and contains no requirements requiring test.	

EN 301 549 clause	Determination of conformance
12.2.2 Information on accessibility and compatibility features	C.12.2.2 Information on accessibility and compatibility features
ICT support services shall provide information on the accessibility and compatibility features that are included in the product documentation. NOTE: Accessibility and compatibility features include accessibility features that are built-in and accessibility features that provide compatibility with assistive technology.	Type of assessment Inspection Pre-conditions 1. ICT support services are provided. Procedure 1. Check that the ICT support services provide information on the accessibility and compatibility features that are included in the product documentation.
	Result Pass: Check 1 is true Fail: Check 1 is false Not applicable: Pre-condition 1 is not met.
12.2.3 Effective communication ICT support services shall accommodate the communication needs of individuals with disabilities either directly or through a referral point.	C.12.2.3 Effective communication Type of assessment Inspection Pre-conditions 1. ICT support services are provided. Procedure 1. Check that the ICT support services accommodate the communication needs of individuals with disabilities either directly or through a referral point. Result

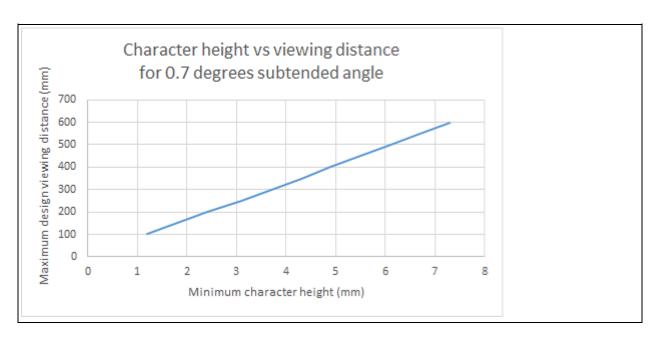

EN 301 549 clause	Determination of conformance	
	Pass: Check 1 is true Fail: Check 1 is false	
	Not applicable: Pre-condition 1 is not met.	
	NOTE: The provision of any level of support for the communication needs of individuals with disabilities constitutes a pass of this requirement. Suppliers may wish to provide further information about the level of support that is provided to enable the adequacy and quality of the support to be judged.	
12.2.4 Accessible documentation	C.12.2.4 Accessible documentation	
Documentation provided by support services shall be made available in at least	Type of assessment	
one of the following electronic formats:	Inspection	
a Web format that conforms to clause 9; or	Pre-conditions	
 a non-web format that conforms to clause 10. NOTE 1: This does not preclude the possibility of also providing the documentation in other formats (electronic or printed) that are not accessible. 	Documentation is provided by the ICT support services. Procedure	
NOTE 2: It also does not preclude the possibility of providing alternate formats that meet the needs of some specific type of users (e.g. Braille documents for blind people or easy-to-read information for persons with cognitive impairments).	Check that documentation in electronic format provided by the ICT support services conforms to the requirements of clauses 9 or 10 as appropriate.	
NOTE 3: A user agent that supports automatic media conversion would be beneficial to enhancing accessibility.	Result	
	Pass: Check 1 is true Fail: Check 1 is false	
	Not applicable: Pre-condition 1 is not met.

Annex – Chapter 14 Conformance

Conformance to the present document is achieved by meeting all the applicable requirements, these are clauses containing the word "shall". Those clauses containing the word "should" are recommendations and are not required for conformance.

All clauses except those in clause 12 are self-scoping. This means they are introduced with the phrase 'Where ICT pre-condition>'. A requirement is met when the pre-condition is true and the corresponding test (in Annex C) is passed. When one of the pre-conditions is false the requirement is not applicable. Consequently, the result of the tests in Annex C can be: not applicable, pass, fail, or (in exceptional circumstances) not testable.

ICT is often comprised of an assembly of two or more items of ICT. In some cases, two or more interoperable items of ICT may together meet more requirements of the standard when one item complements the functionality of the other and the sum together meets more of the accessibility requirements. However, combining two items of ICT, both of which fail to meet any particular requirement, will not lead to a combined ICT system that meets that requirement.

The present document does not prioritize requirements.

NOTE 1: Conformance with the accessibility requirements could be affected by subsequent implementation or maintenance.

NOTE 2: Sampling is frequently required on complex ICT when there are too many instances of the object to be tested. The present document cannot recommend specific ICT evaluation sampling techniques as these are context specific.

The inherent nature of certain situations makes it impossible to make reliable and definitive statements that accessibility requirements have been met. In those situations therefore, the requirements in the present document are not applicable:

- when the product is in a failure, repair or maintenance state where the ordinary set of input or output functions are not available;
- during those parts of start-up, shutdown, and other state transitions that can be completed without user interaction.

NOTE 3: Even in the above situations, it is best practice to apply requirements in the present document wherever it is feasible and safe to do so.

Annex - References (from EN 301 549)

2.1 Normative references

References are specific, identified by date of publication and/or edition number or version number. Only the cited version applies.

Referenced documents which are not found to be publicly available in the expected location might be found at ETSI References in docbox.

NOTE: While any hyperlinks included in this clause were valid at the time of publication, ETSI cannot guarantee their long-term validity.

The following referenced documents are necessary for the application of the present document.

[1] ETSI ETS 300 381 (Edition 1) (December 1994): "Telephony for hearing impaired people; Inductive coupling of telephone earphones to hearing aids".

[2] ETSI ES 200 381-1 (V1.2.1) (October 2012): "Telephony for hearing impaired people; Inductive coupling of telephone earphones to hearing aids Part 1: Fixed-line speech terminals".

[3] ETSI ES 200 381-2 (V1.1.1) (October 2012): "Telephony for hearing impaired people; Inductive coupling of telephone earphones to hearing aids; Part 2: Cellular speech terminals".

[4] W3C Recommendation (December 2008) /ISO/IEC 40500:2012: "Web Content Accessibility Guidelines (WCAG) 2.0".

Annex – Definition of terms, symbols and abbreviations (from EN 301 549)

3.1 Terms

For the purposes of the present document, the terms given in ETSI EG 201 013 [i.4] and the following apply:

accessibility: extent to which products, systems, services, environments and facilities can be used by people from a population with the widest range of user needs, characteristics and capabilities, to achieve identified goals in identified contexts of use (from ISO 9241-11:2018 [i.15])

NOTE 1: Context of use includes direct use or use supported by assistive technologies.

NOTE 2: The context in which the ICT is used may affect its overall accessibility. This context could include other products and services with which the ICT may interact.

access space: space intended to be occupied by the person, including their Assistive Technology, while they are using the product

Assistive Listening Devices (ALDs): devices that help separate the sounds, particularly speech, that a person wants to hear from background noise by bringing sound directly into the ear

NOTE: These are often found in meetings and public venues such as plays, concerts and places of worship. They can also be used at home with televisions and other products with auditory output.

Assistive Technology (AT): equipment, product system, hardware, software or service that is used to increase, maintain or improve capabilities of individuals (from ISO/IEC Guide 71:2014 [i.35])

NOTE 1: Assistive technology is an umbrella term that is broader than assistive products.

NOTE 2: Assistive technology can include assistive services, and professional services needed for assessment, recommendation and provision.

NOTE 3: Where ICT does not support directly connected assistive technology, but which can be operated by a system connected over a network or other remote connection, such a separate system (with any included assistive technology) can also be considered assistive technology. This is an additional note, not included in ISO/IEC Guide 71:2014 [i.35].

audio description: additional audible narrative, interleaved with the dialogue, which describes the significant aspects of the visual content of audio-visual media that cannot be understood from the main soundtrack alone

NOTE: This is also variously described using terms such as "video description" or variants such as "descriptive narration".

authoring tool: software that can be used to create or modify content

NOTE 1: An authoring tool may be used by a single user or multiple users working collaboratively.

NOTE 2: An authoring tool may be a single stand-alone application or be comprised of collections of applications.

NOTE 3: An authoring tool may produce content that is intended for further modification or for use by end-users.

caption: synchronized visual and/or text alternative for both speech and non-speech audio information needed to understand the media content (after WCAG 2.1 [5])

NOTE: This is also variously described using terms such as "subtitles" or variants such as "subtitles for the deaf and hard-of-hearing".

closed functionality: functionality that is limited by characteristics that prevent a user from attaching, installing or using assistive technology

content: information and sensory experience to be communicated to the user by means of software, including code or mark-up that defines the content's structure, presentation, and interactions (after WCAG2ICT [i.26])

NOTE: Content occurs in three places: web pages, documents and software. When content occurs in a web page or a document, a user agent is needed in order to communicate the content's information and sensory experience to the user. When content occurs in software, a separate user agent is not needed in order to communicate the content's information and sensory experience to the user - the software itself performs that function.

context of use: combination of users, goals and tasks, resources, and environment. (from ISO 9241-11:2018 [i.15])

NOTE: The "environment" in a context of use includes the technical, physical, social, cultural and organizational environments.

document: logically distinct assembly of content (such as a file, set of files, or streamed media) that functions as a single entity rather than a collection, that is not part of software and that does not include its own user agent (after WCAG2ICT [i.26])

- NOTE 1: A document always requires a user agent to present its content to the user.
- NOTE 2: Letters, e-mail messages, spreadsheets, books, pictures, presentations, and movies are examples of documents.
- NOTE 3: Software configuration and storage files such as databases and virus definitions, as well as computer instruction files such as source code, batch/script files, and firmware, are examples of files that function as part of software and thus are not examples of documents. If and where software retrieves "information and sensory experience to be communicated to the user" from such files, it is just another part of the content that occurs in software and is covered by WCAG2ICT like any other parts of the software. Where such files contain one or more embedded documents, the embedded documents remain documents under this definition.
- NOTE 4: A collection of files zipped together into an archive, stored within a single virtual hard drive file, or stored in a single encrypted file system file, do not constitute a single document when so collected together. The software that archives/encrypts those files or manages the contents of the virtual hard drive does not function as a user agent for the individually collected files in that collection because that software is not providing a fully functioning presentation of that content.
- NOTE 5: Anything that can present its own content without involving a user agent, such as a self-playing book, is not a document but is software.
- NOTE 6: A single document may be composed of multiple files such as the video content and closed caption text. This fact is not usually apparent to the end-user consuming the document/content.
- NOTE 7: An assembly of files that represented the video, audio, captions and timing files for a movie is an example of a document.
- NOTE 8: A binder file used to bind together the various exhibits for a legal case would not be a document.
- NOTE 9: Documents may contain sub-documents.

embedded: directly included in the content that is downloaded to the user agent and its extension, and is intended to be used in rendering the web page

NOTE: Something that is downloaded using a mechanism on the web page but is not used in rendering the page is not "embedded" in the page.

ICT network: technology and resources supporting the connection and operation of interconnected ICT

Information and Communication Technology (ICT): technology, equipment, or interconnected system or subsystem of equipment for which the principal function is the creation, conversion, duplication, automatic acquisition, storage, analysis, evaluation, manipulation, management, movement, control, display, switching, interchange, transmission, reception, or broadcast of data or information

NOTE: Examples of ICT are web pages, electronic content, telecommunications products, computers and ancillary equipment, software including mobile applications, information kiosks and transaction machines, videos, IT services, and multifunction office machines which copy, scan, and fax documents.

mechanically operable part: operable part that has a mechanical interface to activate, deactivate, or adjust the ICT

NOTE: Examples of mechanically operable parts include scanner covers, notebook docking stations and lids as well as physical switches and latches.

mechanism for private listening: auditory output designed so that only the current user can receive the sound

NOTE: Personal headsets, directional speakers and audio hoods are examples of mechanisms for private listening.

non-text content: content that is not a sequence of characters that can be programmatically determined or where the sequence is not expressing something in human language (after WCAG 2.1 [5])

non-web document: document that is not a web page, not embedded in web pages nor used in the rendering or functioning of the page

non-web software: software that is not a web page, not embedded in web pages nor used in the rendering or functioning of the page

open functionality: functionality that supports access by assistive technology

NOTE: This is the opposite of closed functionality.

operable part: component of ICT used to activate, deactivate, or adjust the ICT

NOTE 1: Operable parts can be provided in either hardware (see mechanically operable parts, above) or software. An on-screen button is an example of an operable part provided by software.

NOTE 2: Operable parts do not include parts involved only in maintenance or repair or other actions that are not expected of a typical user if the product is not malfunctioning. These actions include: clearing paper jams internal to the machine, replacing items or parts internal to the machine that may expose the end user to sharp or hot surfaces, replacing or repairing items designated by manufacturers as service or maintenance items in user documentation.

platform software (platform): collection of software components that runs on an underlying software or hardware layer, and that provides a set of software services to other software components that allows those applications to be isolated from the underlying software or hardware layer (after ISO/IEC 13066-1 [i.19])

NOTE: A particular software component might play the role of a platform in some situations and a client in others.

programmatically determinable: able to be read by software from developer-supplied data in a way that other software, including assistive technologies, can extract and present this information to users in different modalities

NOTE: WCAG 2.1 uses "determined" where this definition uses "able to be read" (to avoid ambiguity with the word "determined").

Real-Time Text (RTT): form of a text conversation in point to point situations or in multipoint conferencing where the text being entered is sent in such a way that the communication is perceived by the user as being continuous

NOTE 1: Users will perceive communication as continuous if the delay between text being created by the sender and received by the recipient is less than 500 ms. However, the actual delay will be dependent on the communication network.

NOTE 2: The creation of text will differ between systems where text is entered on a word-by-word basis (e.g. speech-to-text and predictive-text based systems) and systems where each character is separately generated (e.g. typing on a physical keyboard).

satisfies a success criterion: success criterion does not evaluate to "false" when applied to the ICT (after WCAG 2.1 [5])

single user connection: connection that consists of sound, RTT or video (or a combination of two or three of those media) that is established by a single user action

NOTE: Even though the different media may travel over different channels, and more than one piece of hardware may be involved, it appears to the user like a single connection, and is treated by any intermediate technologies (e.g. network, auto-reception) as a single connection for purposes such as transfer.

spoken captions/subtitles audio captions/subtitles: captions/subtitles that are voiced over the audiovisual content (from ISO/IEC TS 20071-25 [i.31]) **stationary ICT:** ICT that stands on the floor, or is mounted on a wall or other immovable structure, and is not intended to be moved by its user

NOTE 1: Typically, stationary ICT rests on the ground (such as an information kiosk) or is installed in a wall (such as a machine that dispenses cash or performs other banking services).

NOTE 2: A manufacturer cannot control the height of ICT that is put on a table by someone else, but they are able to control the reach dimensions of self-contained ICT that rests on the ground and can specify the heights for installation in walls.

terminal: combination of hardware and/or software with which the end user directly interacts and that provides the user interface

NOTE 1: The hardware may consist of more than one device working together e.g. a mobile device and a computer.

NOTE 2: For some systems, the software that provides the user interface may reside on more than one device such as a telephone and a server.

turn-taking: type of organization in conversation and discourse where participants speak one at a time in alternating turns

user agent: software that retrieves and presents content for users (after WCAG 2.1 [5])

NOTE 1: Software that only displays the content contained within it is treated as software and not considered to be a user agent.

NOTE 2: An example of software that is not a user agent is a calculator application that does not retrieve the calculations from outside the software to present it to a user. In this case, the calculator software is not a user agent, it is simply software with a user interface.

NOTE 3: Software that only shows a preview of content such as a thumbnail or other non-fully functioning presentation is not providing user agent functionality.

user interface: all components of an interactive system (software or hardware) that provide information and/or controls for the user to accomplish specific tasks with the interactive system (from ISO 9241-110 [i.16])

user interface element: entity of the user interface that is presented to the user by the software (after ISO 9241-171 [i.17])

NOTE 1: This term is also known as "user interface component".

NOTE 2: User-interface elements can be interactive or not.

web content: content that belongs to a web page, and that is used in the rendering or that is intended to be used in the rendering of the web page web page: non-embedded resource obtained from a single URI using HTTP plus any other resources that are used in the rendering or intended to be rendered together with it by a user agent (after WCAG 2.1 [5])

Annex - Practical guidance for accessible non-web documentation

In WCAG "success criteria" are all technology agnostic. The requirements for non-web documents are based on the WCAG 2.1 level AA requirements, which means all level A and AA criteria relevant to documents must be met.

The W3C publishes <u>sufficient techniques</u> to meet WCAG success criteria, including techniques for non-web document formats such as PDF. Using a given technique is considered "sufficient" to meet the criteria relevant to the technique, but you can also meet the criteria in other ways.

Shared Services Canada has created a set of guides for producing accessible documents in Microsoft Office:

How to create accessible documents

Various software vendors and organizations offer supplementary material that provides instructions for making documents accessible:

- Adobe PDF accessibility
- Accessible Digital Office Document (ADOD) Project
- Microsoft Accessibility Checker
- Webaim: Microsoft Word Techniques
- Webaim: PDF Techniques
- Canada.ca Content Style Guide
- Google Docs Make your document or presentation accessible
- Web Accessibility Perspectives Compilation of 10 Topics/Videos
- 18F Web Accessibility Guide
- University of Washington Accessible Document Guides

NOTE: Following the guidance given in the links above does not guarantee compliance with WCAG 2.1. Links are provided for reference only.
