ADDENDUM NO 2

1. We have received the following questions. Please note that the questions and answers are an integral part of the addendum.

a) On the plan view of the civil plans, we're told that we're relocating streetlights, whereas on the electrical plans we're told that we're relocating projectors. The concrete bases for streetlights and projectors are very different. Are we relocating streetlights or projectors?

Answers: There is only one streetlight (identified by #14 on plan C200) to be relocated from the island. The other, near the pole (also identified by #14 on plan C200) is a projector to be relocated.

b) The plans for the various items to be relocated (flagpole, streetlight or projector) mention that the anchors and bolting rings are supplied by the equipment supplier. Since we're talking about relocation, who supplies the anchors and bolt rings? If it's us, please provide details.

Answers: Because there are bolt covers, the bolt circle and diameter of the anchor bolts will have to be determined on site during dismantling of each element. It is the responsibility of the Contractor to supply and install the anchor bolts.

c) What is the diameter of the concrete base for the projector?

Answers: The information is shown on the typical detail of concrete base for streetlight on plan C502.

d) What are the dimensions and reinforcement required for the concrete base of the pay terminal?

Answers: An addendum GC-01 will be issued to specify the diameter of the reinforcement in the slab for the pay terminal.

e) What is the diameter of the pipe we need to connect the sump to?

Answers: According to the existing plans, this is a 200mm pipe. We do not know the nature of the pipe material.

2. **VERY IMPORTANT: A copy of your addendum must be included in your bid as proof that you have read the addendum. Otherwise, your tender will be rejected as non-compliant.**
