A. Questions & Answers

A. Questions & Answers

- Q1. As per the RFP under Annex A: Statement of Work, under 4.1 Specification and Performance Requirements, section A. Currency Discriminator Machines, item A.1 states that the currency discriminator machines must be able to count the individual banknotes for several types of currencies. Does the CRA also require the machine to read these different currencies from a mixed stack?**
- A1. No, the machine is required, as per item A.3, to count stacks of mixed “denomination banknotes” of the **same** currency. All stacks being counted will contain the same currency, so this feature is not required for this requirement.
