Powering world-class technology for Government

# Problem statement

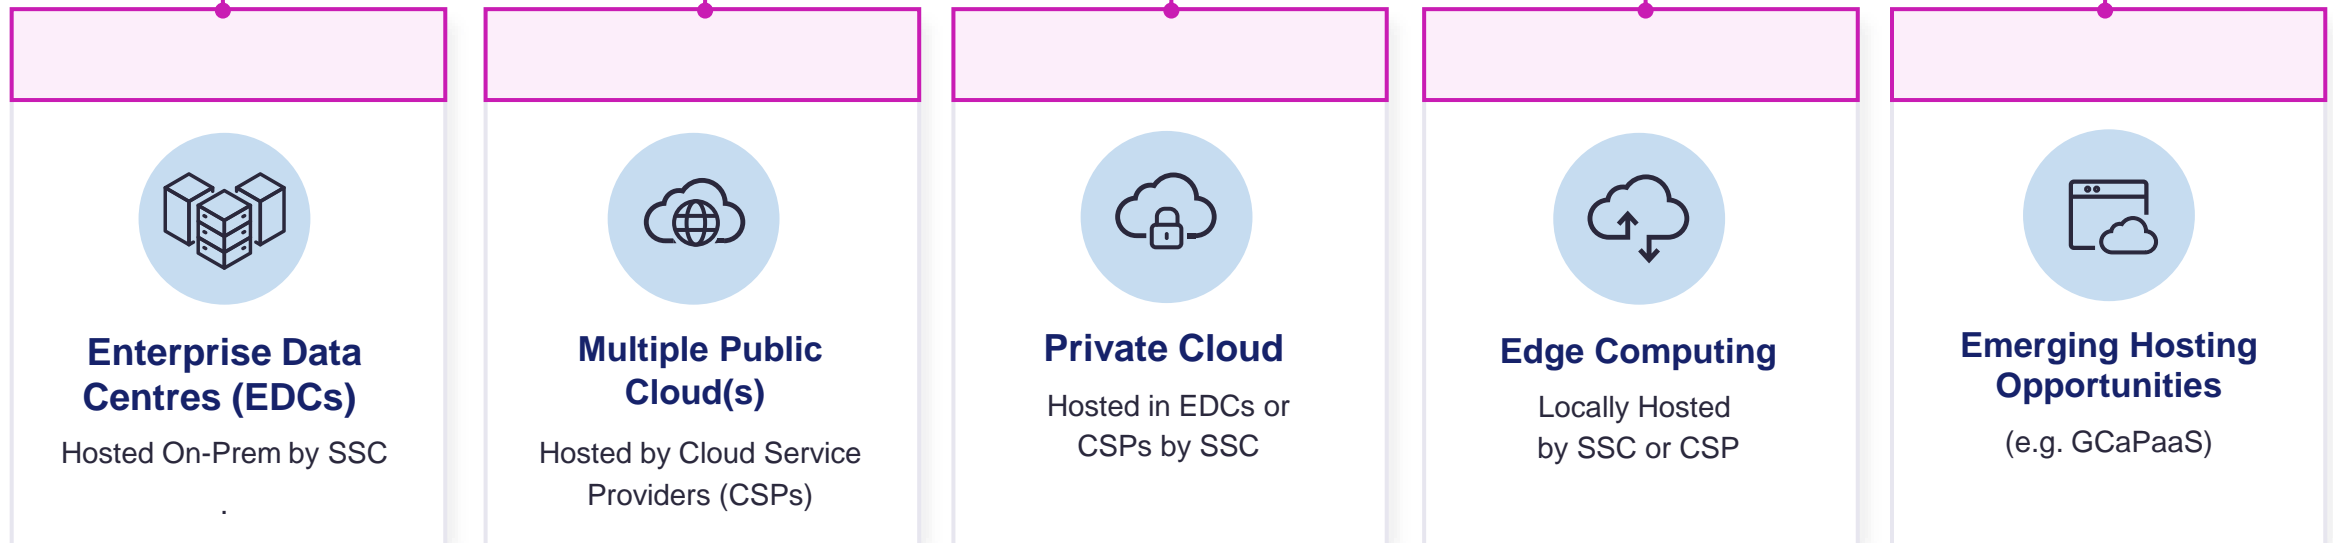

Engage industry to obtain advice or examples linked to how vendors are optimizing hosting placement of applications, workloads, data and hosting operations within their organization and any artifacts that they can share that will help Shared Service Canada, as the primary application hosting provider for the Government of Canada, to improve its capabilities and value to the enterprise.

The goal of the engagement with industry is to help Shared Services Canada understand and determine key factors, trade-offs, methods and constraints that private industry uses to select ideal hosting placements of workloads, balancing cost savings, security, agility, scalability, time-to-market, and customer experience.

# Maximizing The Benefits Of Hosting Services | Meeting Partner Needs

A reliable and sustainable ecosystem where workloads can be hosted across the GC at speed and scale

Roadmaps will outline how a hybrid model will allow the GC to optimize where applications are hosted across multiple options

Secure, Predictable, Instrumented, Transparent, Available, Scalable, Self-Service, Simple, Efficient, Cost-effective

SSC continues to incrementally mature & evolve hosting offerings
